Zebra® XiIIIPlus™
High-Performance Printer

User Guide
DECLARATION OF CONFORMITY

I have determined that the Zebra printers identified as the

XiIIIPlus Series
90XiIIIPlus, 96XiIIIPlus, 110XiIIIPlus,
140XiIIIPlus, 170XiIIIPlus, 220XiIIIPlus

manufactured by:

Zebra Technologies
333 Corporate Woods Parkway
Vernon Hills, Illinois 60061-3109 U.S.A.

Have been shown to comply with the applicable technical standards of the FCC

For Home, Office, Commercial, and industrial use

If no unauthorized changed is made in the equipment,
and if the equipment is properly maintained and operated.

Proprietary Statement

This manual contains proprietary information of Zebra Technologies Corporation and its subsidiaries ("Zebra Technologies"). It is intended solely for the information and use of parties operating and maintaining the equipment described herein. Such proprietary information may not be used, reproduced, or disclosed to any other parties for any other purpose without the expressed written permission of Zebra Technologies.

Product Improvements

Continuous improvement of products is a policy of Zebra Technologies. All specifications and designs are subject to change without notice.

FCC Compliance Statement

This device complies with Part 15 rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for Class B Digital Devices, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a residential environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the product manuals, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, the user is encouraged to do one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
The user is cautioned that any changes or modifications not expressly approved by Zebra Technologies could void the user’s authority to operate the equipment. To ensure compliance, this printer must be used with Shielded Communication Cables.

**Canadian DOC Compliance Statement**

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

**Liability Disclaimer**

Zebra Technologies takes steps to ensure that its published Engineering specifications and manuals are correct; however, errors do occur. Zebra Technologies reserves the right to correct any such errors and disclaims liability resulting therefrom.

**Limitation of Liability**

In no event shall Zebra Technologies or anyone else involved in the creation, production, or delivery of the accompanying product (including hardware and software) be liable for any damages whatsoever (including, without limitation, consequential damages including loss of business profits, business interruption, or loss of business information) arising out of the use of, the results of use of, or inability to use such product, even if Zebra Technologies has been advised of the possibility of such damages. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.
Effective December 30, 2002

All new Zebra products are warranted by the manufacturer to be free from defect in material and workmanship.

Printers and Related Hardware Products

Proof of purchase or shipment date is required to validate the warranty period. The warranty becomes void if the equipment is modified, improperly installed or used, damaged by accident or neglect, or if any parts are improperly installed or replaced by the user.

Products returned must be packaged in the original or comparable packing and shipping container. In the event equipment is not so packaged, or if shipping damage is evident, it will not be accepted for service under warranty. Surface transportation charges for return to customers in the continental United States is paid by Zebra. Otherwise, Zebra pays CPT (carriage paid to) nearest airport; customer pays customs, duties, taxes, and freight from airport to destination. If Zebra determines that the product returned for warranty service or replacement is not defective as herein defined, the customer will pay all handling and transportation costs.

Printers

All printers (excluding printheads) are warranted against defect in material or workmanship for twelve (12) months from the purchase date.

Printheads

Since printhead wear is part of normal operation, the original printhead is covered by a limited warranty as indicated below. Warranty period begins on purchase date.
Warranty Information

To qualify for this warranty, the printhead must be returned to the factory or to an authorized service center. Customers are not required to purchase Genuine Zebra Supplies (media and/or ribbons) for warranty qualification.

However, if it is determined that the use of inappropriate or inferior supplies has caused any defect in the printhead for which a warranty claim is made, the user is responsible for Zebra’s labor and material charges required to repair the defect. The warranty becomes void if the printhead is physically worn or damaged; also if it is determined that failure to follow the preventive maintenance schedule listed in the User Guide has caused defect in the thermal printhead for which a warranty claim is made.

Related Hardware Items

Products are warranted to be free of defects in material and workmanship from the date of purchase according to this chart:

<table>
<thead>
<tr>
<th>Product</th>
<th>Warranty Period</th>
</tr>
</thead>
<tbody>
<tr>
<td>Accessories</td>
<td>1 month</td>
</tr>
<tr>

<td>3 years</td>
</tr>
</tbody>
</table>

Defective product must be returned to Zebra for evaluation. In the event of notification of defect within the warranty period, Zebra will replace the defective item provided there had not been damage resulting from user abuse, modification, improper installation or use, or damage in shipping or by accident or neglect.
Supplies Products

Supplies are warranted to be free from defect in material and workmanship for a period of six (6) months for media and twelve (12) months for ribbon from the date of shipment by Zebra. This is provided the user has complied with storage guidelines, handling, and usage of the supplies in Zebra printers.

Zebra’s sole obligation under these warranties is to furnish parts and labor for the repair or possible replacement of products found to be defective in material or workmanship during the warranty period. Zebra may in its discretion issue a credit for any such defective products in such amount as it deems reasonable.

Repair Services

Zebra repairs are warranted against defects in material and workmanship for 90 days from the date of repair by Zebra. This excludes printheads, which are warranted separately. This warranty does not cover normal wear and tear. This warranty becomes void if the item is modified, improperly installed or used, or damaged by accident, neglect, or abuse.

Warranty Exclusions & Conditions Statement

The warranties given above are the only warranties given to you. No other warranties, express or implied, are given. Zebra does not make any implied warranty of merchantability or fitness for a particular purpose in connection with its sale of products or services. While Zebra’s desire is to be responsive to your specific needs and questions, Zebra does not assume responsibility for any specific application to which any Products are applied, including, but not limited to, compatibility with other equipment. All statements, technical information, or recommendations relating to Zebra Products are based on tests believed to be reliable, but do not constitute a guaranty or warranty.

Zebra’s maximum liability for warranty claims is limited to the invoice price of the Product claimed defective. Zebra does not assume responsibility for delays in replacement or repair of products. Zebra shall not under any circumstances whatsoever be liable to you or any other party for loss or profits, lost data, diminution of goodwill, or any other special or consequential damages whatsoever with respect to any warranty claim made by you. Specifically for software, Zebra is not liable for any incidental or consequential damages caused by abuse or misapplication of the software or by its use in violation of the U.S. copyright law or international treaty. No salesperson, representative, or agent of Zebra is authorized to make any guaranty, warranty, or representation that contradicts the foregoing. Any waiver, alteration, addition, or modification to the foregoing warranties must be in writing and signed by an executive officer of Zebra to be valid.

To provide feedback on this document, please send your comments to techpubs@zebra.com, or write your comments on this page and fax to the following:
Fax: 1.847.821.1795       Attention: TechPubs — CTC
YOU SHOULD CAREFULLY READ THE FOLLOWING TERMS AND CONDITIONS OF THIS ZEBRA TECHNOLOGIES PRINTER SOFTWARE AND FIRMWARE LICENSE AGREEMENT (PSFLA) BEFORE USING THE PRINTER WHICH IS ENCLOSED OR OTHERWISE ASSOCIATED WITH THIS AGREEMENT. IF YOU DO NOT AGREE WITH THESE TERMS AND CONDITIONS, DO NOT OPERATE THE PRINTER AND PLEASE PROMPTLY RETURN THE PRINTER, ENCLOSURES AND ALL PACKAGING FOR A FULL REFUND.

Zebra Technologies (ZEBRA) hereby grants you a non-exclusive, non-transferable license to use the SOFTWARE and FIRMWARE embedded in the printer and the accompanying documentation according to the following terms:

1. The printer enclosed with or otherwise associated with this Agreement has or includes certain SOFTWARE and FIRMWARE therein which is protected by copyright laws and international copyright treaties, as well as other intellectual property laws and treaties. The SOFTWARE and FIRMWARE is licensed, not sold. Such SOFTWARE and/or FIRMWARE may include, but is not limited to, SOFTWARE and/or FIRMWARE that is licensed under one or more of the following trademarks: ZPL (Zebra Programming Language), Zebralink, Web View, Web Alert, ZBI (Zebra Basic Interpreter), BAR-ONE, ZTools, Utilities, ZebraNet View for IP, ZebraNet Alert, PC Management Program, ZebraNet View for Networks and ZebraNet Connect.

2. GRANT OF LICENSE. This License grants you the following rights:
   • SOFTWARE and FIRMWARE. You may use, access, display, run, or otherwise interact with (RUN) the SOFTWARE and FIRMWARE in connection with operating the printer which is enclosed with or otherwise associated with this PSFLA (PRINTER). The primary user of the PRINTER may make a second copy for his or her exclusive use on a portable computer/printer.
   • Storage/Network Use. You may also store or install a copy of the SOFTWARE and FIRMWARE on a storage device, such as a network server, used only to RUN the SOFTWARE and FIRMWARE on your other PRINTERS over an internal network; however, you must acquire and dedicate a license for each separate PRINTER on which the SOFTWARE and FIRMWARE is RUN from the storage device. A license for the SOFTWARE and FIRMWARE may not be shared or used concurrently on different PRINTERS.
• Reservation of Rights. All rights not expressly granted are reserved by ZEBRA.
• Accessing Services Using the SOFTWARE and FIRMWARE. Your use of any service accessible using the SOFTWARE and FIRMWARE is not covered by this PSFLA and may be governed by separate terms of use, conditions or notices.

3. RESTRICTIONS.

• You must maintain all copyright notices on all copies of the SOFTWARE and FIRMWARE.
• Limitations on modification. You may not modify, adapt, translate, or create derivative works based on this SOFTWARE OR FIRMWARE or the accompanying documentation.
• Limitations of Reverse Engineering, Decompilation and Disassembly. You may not reverse engineer, decompile, or disassemble the SOFTWARE or the FIRMWARE, except and only to the extent that such activity is permitted by applicable law notwithstanding this limitation.
• Rental. You may not rent or lease or lend the SOFTWARE or FIRMWARE.
• Support Services. ZEBRA may provide you with support services related to the SOFTWARE and/or FIRMWARE (SUPPORT SERVICES), in its discretion. Use of SUPPORT SERVICES, if any, is governed by the ZEBRA policies and programs described in the user guide, in online documentation, and/or other ZEBRA provided materials. Any supplemental SOFTWARE or FIRMWARE code provided to you as a part of SUPPORT SERVICES shall be considered part of the SOFTWARE and/or FIRMWARE and is subject to the terms of this PSFLA. With respect to technical information you provide to ZEBRA as part of the SUPPORT SERVICES, ZEBRA may use such information for its business purposes, including for product support and development. ZEBRA will not utilize such technical information in a form that personally identifies you except to the extent necessary to provide you with support.
• Replacement, Modification and Upgrade of the SOFTWARE and/or FIRMWARE. ZEBRA reserves the right to replace, modify or upgrade the SOFTWARE and/or FIRMWARE at any time by offering you a replacement or modified version of the SOFTWARE and/or FIRMWARE or such upgrade and to charge for such replacement, modification or upgrade. Any such replacement or modified SOFTWARE and/or FIRMWARE code or upgrade to the SOFTWARE and/or FIRMWARE offered to you by ZEBRA shall be considered part of the SOFTWARE and/or FIRMWARE and subject to the terms of this PSFLA (unless this PSFLA is superseded by a further PSFLA accompanying such replacement or modified version of or upgrade to the SOFTWARE and/or FIRMWARE). In the event that ZEBRA offers a replacement or modified version of or any upgrade to the SOFTWARE and/or FIRMWARE, (a) your continued use of the SOFTWARE and/or FIRMWARE is conditioned on your acceptance of such replacement or modified version of or upgrade to the SOFTWARE and/or FIRMWARE and any accompanying superseding PSFLA and (b) in the case of the replacement or modified SOFTWARE and/or FIRMWARE, your use of all prior versions of the SOFTWARE and/or FIRMWARE is terminated.
4. TERMINATION. Without prejudice to any other rights, ZEBRA may terminate this PSFLA if you fail to comply with the terms and conditions of this PSFLA. ZEBRA may terminate this PSFLA by offering you a superseding PSFLA for the SOFTWARE and/or FIRMWARE or any replacement or modified version of or upgrade to the SOFTWARE and/or FIRMWARE and conditioning your continued use of the SOFTWARE and/or FIRMWARE or such replacement, modified or upgraded version on your acceptance of such superseding PSFLA. In addition, ZEBRA may terminate this PSFLA by notifying you that your continued use of the SOFTWARE and/or FIRMWARE is prohibited. In the event that ZEBRA terminates this PSFLA, you must immediately stop using the SOFTWARE and/or FIRMWARE and destroy all copies of the SOFTWARE and/or FIRMWARE and all of its component parts.

5. COPYRIGHT. All title and copyrights in and to the SOFTWARE and FIRMWARE, the accompanying printed materials, and any copies of the SOFTWARE and FIRMWARE, are owned by ZEBRA or its suppliers. All title and intellectual property rights in and to the content which may be accessed through use of the SOFTWARE and/or FIRMWARE is the property of the respective content owner and may be protected by applicable copyright or other intellectual property laws and treaties. This PSFLA grants you no rights to use such content. If this SOFTWARE and/or FIRMWARE contains documentation which is provided only in electronic form, you may print one copy of such electronic documentation. You may not copy the printed materials accompanying the SOFTWARE and/or FIRMWARE.

6. U.S. GOVERNMENT RESTRICTED RIGHTS. All SOFTWARE and/or FIRMWARE provided to the U.S. Government pursuant to solicitations issued on or after December 1, 1995 is provided with the commercial rights and restrictions described elsewhere herein. All SOFTWARE and/or FIRMWARE provided to the U.S. Government pursuant to solicitations issued prior to December 1, 1995 is provided with RESTRICTED RIGHTS as provided for in FAR, 48 CFR 52.227-14 (JUNE 1987) or DFAR, 48 CFR 252.227-7013 (OCT 1988), as applicable.

7. EXPORT RESTRICTIONS. You agree that you will not export or re-export the SOFTWARE and/or FIRMWARE, any part thereof, or any process or service that is the direct product of the SOFTWARE and/or FIRMWARE (the foregoing collectively referred to as the RESTRICTED COMPONENTS), to any country, person or entity subject to U.S. export restrictions. You specifically agree not to export or re-export any of the RESTRICTED COMPONENTS (i) to any country to which the U.S. has embargoed or restricted the export of goods or services, which currently include, but are not necessarily limited to Cuba, Iran, Iraq, Libya, North Korea, Sudan and Syria, or to any national of any such country, wherever located, who intends to transmit or transport the RESTRICTED COMPONENTS back to such country; (ii) to any person or entity who you know or have reason to know will utilize the RESTRICTED COMPONENTS in the design, development or production of nuclear, chemical or biological weapons; or (iii) to any person or entity who has been prohibited from participating in U.S. export transactions by any federal agency of the U.S. government. You warrant and represent that neither the U.S. Commerce Department, Bureau of Export Administration nor any other U.S. federal agency has suspended, revoked or denied your export privileges.
8. DISCLAIMER OF WARRANTIES. ZEBRA AND ITS SUPPLIERS PROVIDE THE SOFTWARE AND/OR FIRMWARE “AS IS” AND WITH ALL FAULTS, AND HEREBY DISCLAIM ALL OTHER WARRANTIES AND CONDITIONS, EITHER EXPRESS, IMPLIED OR STATUTORY, INCLUDING BUT NOT LIMITED TO ANY (IF ANY) IMPLIED WARRANTIES OR CONDITIONS OF MERCHANTABILITY, OF FITNESS FOR A PARTICULAR PURPOSE, OF LACK OF VIRUSES, AND OF LACK OF NEGLIGENCE OR LACK OF WORKMANLIKE EFFORT. ALSO, THERE IS NO WARRANTY OR CONDITION OF TITLE, OF QUIET ENJOYMENT, OR OF NONINFRINGEMENT. THE ENTIRE RISK ARISING OUT OF THE USE OR PERFORMANCE OF THE SOFTWARE AND FIRMWARE IS WITH YOU. ZEBRA DOES NOT WARRANT THAT THE OPERATION OF THE SOFTWARE OR FIRMWARE WILL BE UNINTERRUPTED OR ERROR FREE.

9. EXCLUSION OF ALL DAMAGES. TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, IN NO EVENT SHALL ZEBRA OR ITS SUPPLIERS BE LIABLE FOR ANY CONSEQUENTIAL, INCIDENTAL, DIRECT, INDIRECT, SPECIAL, PUNITIVE, OR OTHER DAMAGES WHATSOEVER (INCLUDING, WITHOUT LIMITATION, DAMAGES FOR ANY INJURY TO PERSON OR PROPERTY, DAMAGES FOR LOSS OF PROFITS, BUSINESS INTERRUPTION, LOSS OF BUSINESS INFORMATION, FOR LOSS OF PRIVACY FOR FAILURE TO MEET ANY DUTY INCLUDING OF GOOD FAITH OR OF REASONABLE CARE, FOR NEGLIGENCE, AND FOR ANY PECUNIARY OR OTHER LOSS WHATSOEVER) ARISING OUT OF OR IN ANY WAY RELATED TO THE USE OF OR INABILITY TO USE THE SOFTWARE OR FIRMWARE, WHETHER BASED ON CONTRACT, TORT, NEGLIGENCE, STRICT LIABILITY OR OTHERWISE, EVEN IF ZEBRA OR ANY SUPPLIER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. THIS EXCLUSION OF DAMAGES SHALL BE EFFECTIVE EVEN IF ANY REMEDY FAILS OF ITS ESSENTIAL PURPOSE.

10. LIMITATIONS AND RELEASE OF LIABILITY.

- To the extent that the SOFTWARE and/or FIRMWARE covered by this PSFLA includes emulation libraries, emulation libraries are offered “as is”. ZEBRA does not provide any warranty associated with the emulation libraries.
- The emulation library does not work 100% correctly or cover 100% of the functionality of the printer language being emulated. Modifications may be required for each target application. If such modification is necessary, prior to making any such modification, you are required to contact ZEBRA to obtain express written consent to make such modification.
- If the emulation library is sold separately by an authorized party other than ZEBRA (RESELLER—A party other than ZEBRA which is authorized by ZEBRA to distribute the SOFTWARE and/or FIRMWARE with its application so long as the SOFTWARE and/or FIRMWARE is used with a ZEBRA printer) or is sold bundled with a printer to an end-user by a RESELLER, and if claims are made by the RESELLER that the emulation library performs as a 100% emulation solution, ZEBRA is not responsible if the emulation library does not work as advertised by the RESELLER. Furthermore, ZEBRA is not liable for any damages directly or indirectly relating to such emulation library which is sold separately by the RESELLER or which is sold bundled with a printer to an end-user by the RESELLER.
The SOFTWARE and FIRMWARE was provided to you at no additional charge and ZEBRA has included in this PSFLA terms that disclaim all warranties and liability for the SOFTWARE and FIRMWARE. To the full extent allowed by law, YOU HEREBY RELEASE ZEBRA AND ITS SUPPLIERS FROM ANY AND ALL LIABILITY ARISING FROM OR RELATED TO ALL CLAIMS CONCERNING THE SOFTWARE AND/OR FIRMWARE OR ITS USE. If you do not wish to accept the SOFTWARE OR FIRMWARE under the terms of this PSFLA, do not use the PRINTER enclosed with or otherwise associated with this PSFLA.

11. GOVERNING LAW. If you acquired the SOFTWARE and/or FIRMWARE in the United States of America, the laws of the State of Illinois, U.S.A. will apply to this contract. If you acquired this SOFTWARE and/or FIRMWARE outside of the United States of America, then local law may apply. If any provision of this PSFLA is held invalid, the remainder of this PSFLA shall continue in full force and effect.

12. QUESTIONS. Should you have any questions, or if you desire to contact ZEBRA for any reason, please contact the ZEBRA subsidiary serving your country, or write:

Document Conventions

The following conventions are used throughout this document to convey certain information:

**Alternate Color**  (online only) Cross-references contain hot links to other sections in this guide. If you are viewing this guide online in .pdf format, you can click the cross-reference (blue text) to jump directly to its location.

**Command Line Examples**  All command line examples appear in **Courier New** font. For example, you would type the following to get to the Post-Install scripts in the bin directory:

```
Ztools
```

**Files and Directories**  All file names and directories appear in **Courier New** font. For example, the `Zebra<version number>.tar` file and the `/root` directory.

**Cautions, Important, Note, and Example**

**Electrostatic Discharge Caution**  • Warns you of the potential for electrostatic discharge.

**Electric Shock Caution**  • Warns you of a potential electric shock situation.

**Caution**  • Warns you of a situation where excessive heat could cause a burn.

**Caution**  • Advises you that failure to take or avoid a specific action could result in physical harm to you.

**Caution**  • Advises you that failure to take or avoid a specific action could result in physical harm to the hardware.

**Important**  • Advises you of information that is essential to complete a task.

**Note**  • Indicates neutral or positive information that emphasizes or supplements important points of the main text.

**Example**  • Provides an example, often a scenario, to better clarify a section of text.

**Tools**  • Tells you what tools you need to complete a given task.
Illustration Callouts Callouts are used when an illustration contains information that needs to be labeled and described. A table that contains the labels and descriptions follows the graphic. Figure 1 provides an example.

Before You Begin

Review this checklist, and resolve any issues before you begin setting up your printer. When you are ready, continue with Printer Operation on page 19.

☐ Unpack and Inspect  Have you unpacked the printer and inspected it for damage? If you have not, see Unpack and Inspect the Printer on page 9.

☐ Select a Site  Have you selected an appropriate location for the printer? If you have not, see Select a Site for the Printer on page 10.

☐ Attach Power Cord  Do you have the correct power cord for your printer? If you are unsure, see Power Cord Specifications on page 11. To attach the power cord and connect the printer to a power source, see Connect the Printer to a Power Source on page 11.

☐ Connect to a Data Source  Have you determined how the printer will be connected to a data source (usually a computer)? For more information, see Select a Communication Interface on page 12.

☐ Select Media  Do you have the correct media for your application? If you are unsure, see Types of Media on page 14.

☐ Select Ribbon  Do you need to use ribbon, and is the appropriate ribbon available, if needed? If you are unsure, see Ribbon on page 16.
Unpack and Inspect the Printer

When you unpack the printer, save all packing materials. When the printer is out of the box, raise the printer’s media door, and remove the power cord.

Inspect the printer for possible damage incurred during shipment. Check all exterior surfaces for damage. Raise the media door, and inspect the media compartment for damage to components.

Report Shipping Damage

If you discover shipping damage upon inspection:

• Immediately notify the shipping company of the damage, and file a damage report with them. Zebra is not responsible for any damage incurred during shipment of the equipment and does not repair this damage under warranty.
• Keep all packaging material for shipping company inspection.
• Notify your authorized Zebra reseller.

Store or Reship the Printer

If you are not placing the printer into immediate operation, repackage it using the original packing materials. You may store the printer under the following conditions:

• Temperature: –40° to 140°F (–40° to 60°C)
• Relative humidity: 5% to 85% non-condensing

If you must ship the printer, remove any ribbon and media from the supply spools to avoid damaging the printer. Carefully pack the printer into the original container or a suitable alternate container to avoid damage during transit.
Select a Site for the Printer

Consider the following when selecting an appropriate location for your printer.

Select a Surface

Select a solid, level surface of sufficient size and strength to accommodate the printer and other equipment (such as a computer), if necessary. The choices include a table, countertop, desk, or cart.

Provide Proper Operating Conditions

Because the printer was designed and is fabricated as an industrial-type unit, it functions satisfactorily in a location that conforms to specified environmental and electrical conditions, including a warehouse or factory floor. For more information on the required conditions, see General Specifications on page 122.

Table 3 shows the temperature and relative humidity requirements for the printer when it is operating.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Temperature</th>
<th>Relative Humidity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thermal Transfer</td>
<td>41° to 104°F (5° to 40°C)</td>
<td>20 to 85% non-condensing</td>
</tr>
<tr>
<td>Direct Thermal</td>
<td>32° to 104°F (0° to 40°C)</td>
<td>20 to 85% non-condensing</td>
</tr>
</tbody>
</table>

Caution • Do not place any padding or cushioning material behind or under the printer because this restricts air flow and could cause the printer to overheat.

Allow Proper Space

The printer should have enough space around it for you to be able to open the media door. To allow for proper ventilation and cooling, leave open space on all sides of the printer.

Provide a Data Source

If the printer will be located away from the data source, the selected site must provide the appropriate connections to that data source. For more information on the types of communication interfaces, see Select a Communication Interface on page 12.
Connect the Printer to a Power Source

Caution • For personnel and equipment safety, always use an approved three-conductor power cord specific to the region or country intended for installation. This cord must use an IEC 320 female connector and the appropriate region-specific three-conductor grounded plug configuration.

To connect the printer to a power source, complete these steps:

1. Turn the printer power switch (located on the rear of the printer) to the Off (O) position.
2. Plug the power cord into the mating connector on the rear of the printer.
3. Plug the other end of the power cord into the power source.

Power Cord Specifications

Depending on how your printer was ordered, a power cord may or may not be included. If one is not included or if the one included is not suitable for your requirements, refer to the following guidelines:

• The overall cord length must be less than 9.8 ft (3.0 m).
• The cord must be rated for at least 5 A, 250 V.
• The chassis ground (earth) must be connected to ensure safety and reduce electromagnetic interference. The third wire in the power cord grounds the connection (Figure 6).

Figure 6 • Power Cord Specifications

1 2 3 4

1 AC power plug for your country
2 3-conductor HAR cable
3 IEC 320 connector
4 Neutral, earth, live in contact view

• The AC power plug and the IEC 320 connector must bear the certification mark of at least one of the known international safety organizations shown in Figure 7.

Figure 7 • International Safety Organization Marks
Printer Setup
Select a Communication Interface

Select a Communication Interface

The way that you connect your printer to a data source depends on the communication options installed in the printer.

**Standard interfaces:** The standard communication interfaces are an RS-232 serial data port, a bidirectional parallel port, and a USB 2.0 port.

**Note:** RS-422 and RS-485 serial data ports are available through an adapter. A DB-25 cable and a USB 2.0 cable are also available.

Figure 8 shows the location of the communication interfaces on the back of the printer. For more information about these interfaces, see *Data Ports* on page 75.

![Figure 8 • Communication Interfaces](image)

**Optional Print Servers:**

- ZebraNet Wireless Print Server. For more information on this option, see the *ZebraNet Wireless Print Server User Guide* (Zebra part number 13422L-001).
- ZebraNet 10/100 Print Server (10/100 PS). For more information on 10/100 PS, see the *ZebraNet 10/100 Print Server User and Reference Guide* (Zebra part number 47619L-001).
- ZebraNet PrintServer II (PSII). For more information on PSII, see the *PrintServer II User and Reference Guide* (Zebra part number 45537L).
Data Cable Requirements

Data cables must be fully shielded and fitted with metal or metallized connector shells. Shielded cables and connectors are required to prevent radiation and reception of electrical noise.

To minimize electrical noise pickup in the cable:

- Keep data cables as short as possible.
- Do not bundle the data cables tightly with the power cords.
- Do not tie the data cables to power wire conduits.

**Note** • Zebra printers comply with FCC Rules and Regulations, Part 15 for Class B Equipment using fully shielded, 6.5 ft (2 m) data cables. Use of unshielded cables may increase radiation above the Class B limits.

**Note** • RS-422 and RS-485 applications should use twisted shielded pairs as recommended in the TIA/EIA-485 Specification.
Types of Media

Your printer is capable of using various forms of media. These include roll and fanfold media (Figure 9) that may be labels or card stock and that may have optional perforations, black marks, or registration holes. The following sections contain descriptions of the various types of media approved for use in your printer.

Figure 9 • Roll and Fanfold Media

Selecting Media

We strongly recommend the use of Zebra-brand supplies for continuous high-quality printing. A wide range of paper, polypropylene, polyester, and vinyl stock has been specifically engineered to enhance the printing capabilities of the printer and to ensure against premature printhead wear.

Important • Certain printing conditions may require that you adjust printing parameters, such as print speed, darkness, or print mode. These conditions include (but are not limited to):

- printing at high speeds
- cutting or peeling the media
- the use of extremely thin, small, synthetic, or coated labels

Because print quality is affected by these and other factors, it is important that you run tests to determine the best combination of printer settings and media for your application. A poor match may limit print quality or print rate, or the printer may not function properly in the desired print mode.
Non-Continuous Media

Non-continuous web media refers to individual labels that are separated by a gap, notch, or hole (Figure 10). When you look at the media, you can tell where one label ends and the next one begins.

![Figure 10 • Non-Continuous Web Media](image)

**Important** • When using media that has holes or notches, position the upper sensor directly over a hole or notch.

Non-continuous black mark media has black marks printed on the back, which indicate the start and end of each label. Figure 11 shows a sample of non-continuous black mark media.

![Figure 11 • Non-Continuous Black Mark Media](image)

Continuous Media

Continuous media (Figure 12) is one uninterrupted roll of material without gaps, holes, notches, or black marks. This allows the image to be printed anywhere on the label. The individual labels can be cut apart or stored in a roll for later use.

![Figure 12 • Continuous Media](image)
Ribbon

Ribbon is a thin film that is coated on one side with wax or wax resin, which is transferred to the media during the thermal transfer process. The media determines whether you need to use ribbon and how wide the ribbon must be.

When to Use Ribbon

Thermal transfer media requires ribbon for printing while direct thermal media does not. To determine if ribbon must be used with a particular media, perform a media scratch test.

To perform a label scratch test, complete these steps:

1. Scratch the print surface of the media with your fingernail.
2. Did a black mark appear on the media?

<table>
<thead>
<tr>
<th>If a black mark...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does not appear on the media</td>
<td>The media is thermal transfer. A ribbon is required with this type of media.</td>
</tr>
<tr>
<td>Appears on the media</td>
<td>The media is direct thermal. No ribbon is required for this type of media, though ribbon may be used to help protect the printhead from abrasion with the media.</td>
</tr>
</tbody>
</table>

Ribbon Width

When ribbon is used, it must be as wide as or wider than the media being used. If the ribbon is narrower than the media, areas of the printhead are unprotected and subject to premature wear.

Coated Side of Ribbon

Ribbon can be wound with the coated side on the inside or outside (see Figure 13). This printer can only use ribbon that is coated on the outside. If you are unsure which side of a particular roll of ribbon is coated, perform an adhesive test or a ribbon scratch test to determine which side is coated.

Figure 13 • Ribbon Coated on Outside or Inside

Outside

Inside
Adhesive Test

If you have labels available, perform the adhesive test to determine which side of a ribbon is coated. This method works well for ribbon that is already installed.

**To perform an adhesive test, complete these steps:**

1. Peel a label from its backing.
2. Press a corner of the sticky side of the label to the outer surface of the roll of ribbon.
3. Peel the label off of the ribbon.
4. Observe the results. Did flakes or particles of ink from the ribbon adhere to the label?

<table>
<thead>
<tr>
<th>If ink from the ribbon...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adhered to the label</td>
<td>The ribbon is coated on the outer surface.</td>
</tr>
<tr>
<td>Did not adhere to the label</td>
<td>The ribbon is likely coated on the inner surface.</td>
</tr>
<tr>
<td></td>
<td>a. Press a corner of the sticky side of the label to the inner surface of the roll of ribbon.</td>
</tr>
<tr>
<td></td>
<td>b. Peel the label off of the ribbon.</td>
</tr>
<tr>
<td></td>
<td>c. Observe the results again. The ink from the ribbon should have adhered to the label. If the ink did not stick either time, repeat the adhesive test with a stickier adhesive, or perform the ribbon scratch test. If you discover that the ribbon is coated on the inside, you will not be able to use this ribbon in your printer.</td>
</tr>
</tbody>
</table>

Ribbon Scratch Test

If you do not have labels available, perform the ribbon scratch test. This method works best if the ribbon is not installed.

**To perform a ribbon scratch test, complete these steps:**

1. Unroll a short length of ribbon.
2. Place the unrolled section of ribbon on a piece of paper with the outer surface of the ribbon in contact with the paper.
3. Scratch the inner surface of the unrolled ribbon with your fingernail.
4. Lift the ribbon from the paper.
5. Observe the results. Did the ribbon leave a mark on the paper?

<table>
<thead>
<tr>
<th>If the ribbon...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Left a mark on the paper</td>
<td>The ribbon is coated on the outer surface.</td>
</tr>
<tr>
<td>Did not leave a mark on the paper</td>
<td>The ribbon is likely coated on the inner surface.</td>
</tr>
<tr>
<td></td>
<td>a. Flip the ribbon over on the paper so the inner side of the ribbon comes in contact with the paper.</td>
</tr>
<tr>
<td></td>
<td>b. Scratch the outer surface of the unrolled ribbon with your fingernail.</td>
</tr>
<tr>
<td></td>
<td>c. Lift the ribbon from the paper.</td>
</tr>
<tr>
<td></td>
<td>d. Observe the results again. The ribbon should have left a mark on the paper. If not, repeat the test, starting with the first side again. You may need to scratch the surface of the ribbon harder.</td>
</tr>
</tbody>
</table>
If you have completed the tasks and resolved the issues in the checklist in Before You Begin on page 8, follow the instruction in this chapter to load and calibrate your printer and to print configuration labels.

Contents

Load the Printer ................................................................. 20

   Toggle Position Adjustment ....................................... 37
   Printhead Pressure Adjustment .................................. 37
Load the Printer

This section gives you a series of instructions to load labels and ribbon (if used). The instructions that follow are for a standard printer in Tear-Off Mode. To choose different printing modes, see Print Modes and Options on page 39.

Caution • Be sure the printer is Off (O) if you have connected the power cable.

Load Roll Media

Roll media feeds through the printer from the media hanger or media supply spindle. Figure 14 identifies the components of the printer that you need to be familiar with to load roll media.

Figure 14 • Interior Components for Media Loading

To load roll media, complete these steps:

1. Open the printhead.
2. Slide the media guide away from the printer frame. You might need to loosen the media guide screw.
3. Put the roll of media on the media hanger or spindle. If using a media hanger, adjust the media guide on the hanger so it just touches the media.
4. Push the label core toward the printer frame. The labels must be aligned with the label core.
5. Feed the media under the media guide roller and under the printhead.

6. Do you have the Cutter option?

<table>
<thead>
<tr>
<th>If...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>No</td>
<td>Continue with the next step.</td>
</tr>
<tr>
<td>Yes</td>
<td>Feed the media through the cutter.</td>
</tr>
</tbody>
</table>

**Caution** • The cutter blade is sharp. Do not rub or touch the blade with your fingers.

7. Adjust the media guide so it is just touching, but does not restrict, the edge of the media. The labels should lie flat as shown in Figure 15.

**Figure 15 • Media Position**

8. Which type of media are you using?

<table>
<thead>

</tr>
<tr>
<td>Not sure</td>
<td>Go to <em>When to Use Ribbon</em> on page 16.</td>
</tr>
</tbody>
</table>
Load Fanfold Media

Fanfold media feeds through either the bottom or rear access slot from outside the printer. The media hanger and media supply spindle are not used with fanfold media.

To load fanfold labels, complete these steps:

1. Slide the printhead lever to the Open position.
2. Slide the media guide as far from the printer frame as possible.
3. How do you want to feed the fanfold labels?
   - From the bottom slot in the printer body.
     Figure 16 shows the printer with fanfold labels loaded through the bottom slot.

</tr>
<tr>
<td>Not sure</td>
<td>Go to <em>When to Use Ribbon</em> on page 16.</td>
</tr>
</tbody>
</table>
Load Ribbon

Before you load ribbon, make sure that the labels that you are using need ribbon. Only thermal transfer media requires ribbon. Ribbon is not required with direct thermal media, though it may be used to protect the printhead from abrasion. For more information, see *When to Use Ribbon* on page 16.

**Caution** • Use ribbon that is wider than the thermal transfer media. If the printhead is not protected by the ribbon, the resulting abrasion from the media may cause premature printhead wear.

A ribbon leader makes it easier to load and unload ribbon. Make a leader for your ribbon roll if it does not already have one.

**To make a ribbon leader, complete these steps:**

1. Unroll the ribbon about 6 in. (15 cm).
2. Tear off a strip of labels and backing about 6 in. (15 cm) long from the label roll.
3. Peel a label from the backing.
4. Overlap the ribbon and the backing with the ribbon on top, and use the label to tape them together. This serves as a ribbon leader (*Figure 18*).

*Figure 18 • Ribbon Leader*
To load the ribbon, complete these steps:

1. Align the segments of the ribbon supply spindle as shown in Figure 19.

   **Figure 19 • Ribbon Supply Spindle Segments**

2. Place the roll of ribbon on the ribbon supply spindle, and push the core as far back as it can go. Figure 20 shows the printer components that are mentioned in this procedure.

   **Figure 20 • Interior Components for Ribbon Loading**

   | 1 | Top roller |
   | 2 | Ribbon take-up spindle |
   | 3 | Ribbon supply spindle |
   | 4 | Ribbon guide roller |
   | 5 | Ribbon leader attached to ribbon |
   | 6 | Platen roller (not shown) |
   | 7 | Printhead lever (shown in the Open position) |

3. If the printhead is closed, open it using the printhead lever.

4. Thread the ribbon leader and attached ribbon under the ribbon guide roller, through the print mechanism, and past the platen roller.

   **Note** • For the 170XiIIIPlus and 220XiIIIPlus, thread the leader first through the ribbon dancer roller assembly (not shown).
5. Pull the ribbon leader over the printhead and above the top roller (Figure 21).

Figure 21 • Threading Ribbon Past Printhead and Platen Roller

6. Bring the ribbon leader and ribbon under the ribbon take-up spindle, and wrap them around the spindle. Figure 22 shows the ribbon leader wrapped around the ribbon take-up spindle.

Figure 22 • Wrapping Ribbon around Spindle

7. Turn the ribbon take-up spindle counterclockwise until the ribbon stays on it, as shown.
8. Close the printhead.

Figure 23 shows how your printer should look with the media and ribbon loaded.

Figure 23 • Ribbon Loaded in Printer
Remove Used Ribbon

When the ribbon has run out or must be changed, remove the used ribbon from the take-up spindle (Figure 24).

To remove used ribbon, complete these steps:

1. Open the printhead.
2. Has the ribbon run out?

<table>
<thead>
<tr>
<th>If the ribbon...</th>
<th>Then</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ran out</td>
<td>Continue with the next step.</td>
</tr>
</tbody>
</table>
| Did not run out  | Tear or cut the ribbon as close to the ribbon take-up spindle as possible.  
                  | **Caution** • Do not cut through the ribbon that is on the take-up spindle because you may damage the spindle. Use the release knob to slide the ribbon off of the spindle. |

3. While holding the ribbon take-up spindle, turn the ribbon release knob clockwise until it stops.  
The ribbon release bars pivot down, easing the spindle’s grip on the used ribbon.
4. Slide the used ribbon off of the ribbon take-up spindle.
5. Align the arrow on the ribbon take-up spindle knob with the notch in the ribbon take-up spindle.
6. To load new ribbon, see *Load Ribbon on page 24.*
Print a Printer Configuration Label

When you have loaded the media and ribbon (if necessary), print a printer configuration label to use as a record of your printer settings. Keep the label for baseline information on your printer when troubleshooting printing problems.

Caution • For personal and equipment safety, always use an approved three-conductor power cord specific to the region or country intended for installation. This cord must use an IEC 320 female connector and the appropriate region-specific three-conductor grounded plug configuration.

To print a configuration label, complete these steps:

1. Connect the power cord to the power connection on the back of the printer.

2. To confirm the power connection, turn the printer On (I).
   The printer performs the power-up self test (POST). When the test is complete, PRINTER READY displays on the front panel LCD.

3. Does the front panel LCD display PRINTER READY?

   If...      Then...
   Yes        Continue with the next step.
   No         Go to Troubleshooting on page 103.

4. Turn the printer Off (O).

5. Press and hold CANCEL while turning the printer On (I).

6. Release CANCEL when the DATA light turns off (approximately five seconds).
   The configuration label prints (Figure 25).

7. Did the label print?

   If a configuration label...     Then...
   Printed     Connect the printer to your data source. Communication can be handled in many different ways. More information about the options is available in Select a Communication Interface on page 12.
   Did not print Sensors out of position is a common cause of printing problems. Refer to Adjust and Calibrate Sensors on page 33. For additional assistance, refer to Troubleshooting on page 103.

**Printer Operation**

Print a Printer Configuration Label

**Figure 25**
Print a Network Configuration Label

If you are using a print server, you can print a network configuration label after the printer is hooked to the network. A network configuration label lists the settings for the ZebraNet wired print server and the ZebraNet Wireless Print Server (if installed). The active print server is indicated by an asterisk.

To print a network configuration label, complete these steps:

1. From the front panel, press SETUP/EXIT.
2. Scroll through the parameters until you reach LIST NETWORK.
3. Confirm printing.

A network configuration label prints (Figure 26).

Figure 26 • Network Configuration Label
Calibrate the Printer

There are five different ways that the printer can be calibrated. You may calibrate the printer as needed.

- **Auto-calibration** occurs when the printer feeds media after the printhead is closed and when the printer is first turned on (see Media Power Up on page 67 and Head Close on page 67 for options). The printer automatically sets the value it detects for the spaces between labels. This type of calibration also happens as part of both the sensor profile and media and ribbon sensor calibration procedures.

- **Long Calibration**, which you select by pressing PAUSE then CALIBRATE, calibrates the printer for media length, media type (continuous or non-continuous), and print mode (thermal or direct thermal transfer) and updates the sensor values. This calibration is the same as what is performed when Calibration is selected for the MEDIA POWER UP and HEAD CLOSE parameters. For more information, see Media Power Up on page 67 or Head Close on page 67.

- **Short Calibration**, which is a selection for the MEDIA POWER UP and HEAD CLOSE parameters, uses current sensor values rather than detecting the spaces between labels and resetting the sensors. This calibration sequence may use fewer labels than the long calibration sequence, but it is less reliable because the values that are stored in the sensors could be incorrect. For more information, see Media Power Up on page 67 or Head Close on page 67.

- **Sensor Profile Calibration**, which you select through the front panel, auto-calibrates the printer and prints a media sensor profile. See Sensor Profile on page 62 for instructions.

- **Media and Ribbon Sensor Sensitivity Calibration**, which you select through the front panel, resets the sensitivity of the sensors to detect correctly the media and ribbon that you are using. See Media and Ribbon Sensor Calibration on page 33 for instructions. If you change the type of ribbon and/or media, you might need to reset the sensitivity of the media and ribbon sensors. When the sensors are at their new sensitivity, the printer performs an auto-calibration.
Adjust and Calibrate Sensors

This section describes how to adjust and calibrate sensors.

Media and Ribbon Sensor Calibration

Media and ribbon sensor calibration is one of the most common adjustments to the printer settings. This procedure is performed through the front panel.

Indications that the sensitivity may need to be reset are:
- The CHECK RIBBON light is on even though the ribbon is properly installed.
- Non-continuous labels are being treated as continuous labels.

Note • Before you begin the calibration procedure, make sure that the maximum length is set to a value 1 in. (25.4 mm) greater than the length of the labels that you are using. If the maximum length is set to a lower value, the calibration process assumes that continuous media is in the printer.

Important • This procedure must be followed exactly as presented. All of the steps must be performed even if only one of the sensors requires adjustment. You may press the left oval at any step in this procedure to cancel the procedure.

To adjust the sensitivity of media and ribbon sensors, complete these steps:

1. From the front panel, press the right oval to start the calibration procedure.
   The LOAD BACKING prompt displays.
2. Open the printhead.
3. Remove approximately 8 in. (203 mm) of labels from the media backing, and pull the media into the printer so that only the backing is between the media sensors.
4. Leave the printhead open.
5. Press the right oval to continue.
   The REMOVE RIBBON prompt displays.
6. Remove the ribbon (if used).
7. Close the printhead.
8. Press the right oval to continue.
   The message CALIBRATING PLEASE WAIT displays.
   The printer adjusts the scale (gain) of the signals that it receives from the media and ribbon sensors. On the sensor profile, this essentially corresponds to moving the peak of the graph up or down to optimize the readings for your application (for more information, see Sensor Profile on page 62).
   When calibration is complete, RELoad ALL displays.
9. Open the printhead and pull the media forward until a label is positioned under the media sensor.
10. Reload the ribbon (if used) into its proper position.
11. Close the printhead.

12. Press the right oval to continue.

The printer does a calibration equivalent to pressing CALIBRATE; during this process, the printer determines the label length. To see the new readings on the new scale, print a sensor profile.
Transmissive (Media) Sensors

The transmissive sensor consists of two sections: a light source (the lower media sensor) and a light sensor (the upper media sensor). The media passes between the two.

Adjust these sensors only when the printer cannot detect the top of the label. The front panel LCD displays ERROR CONDITION PAPER OUT, even though there are labels loaded in the printer.

Note • For most models of XiIIIPlus, the upper media sensor can be positioned along the inside half of the media (the side closest to the back of the printer) or the outside half of the media (the side farthest from the back of the printer). However, for the 220XiIIIPlus, you cannot move the sensors to the outside half of the media.

To adjust the upper media sensor for the inside half of the media, complete these steps:

1. Remove the ribbon (if ribbon is used).
2. Locate the upper media sensor (Figure 27). The upper media sensor eye is directly below the adjustment screw head.

   Figure 27 • Upper Media Sensor Location

   | 1  | Upper media sensor adjustment screw |
   | 2  | Upper media sensor                  |

3. Slightly loosen the upper media sensor adjustment screw using a Phillips-head screwdriver.
4. Using the tip of the screwdriver, slide the upper sensor along the slot to the desired position (for non-continuous media with a notch or hole in the media, the sensor must be directly above the notch or hole).
5. Tighten the adjustment screw to secure the upper media sensor.
To adjust the upper media sensor for the outside half of the media (all models except the 220XiIIIPlus):

1. Remove the ribbon (if ribbon is used).
2. Locate the upper media sensor. The upper media sensor eye is directly below the adjustment screw head.
3. Remove the upper media sensor adjustment screw using a Phillips-head screwdriver.
4. Lift the upper media sensor assembly from the slot, and move it and the wire cover to the outside slot. Carefully pull the wires through the cable tie. You may need to set aside the sensor wire cover if the adjustment is too far to the outside.
5. Replace and slightly tighten the adjustment screw.
6. Slide the upper media sensor along the slot to the desired position (for non-continuous media with a notch or hole in the media, the sensor must be directly above the notch or hole).
7. Tighten the adjustment screw.
8. Make sure that the wires are routed back into the groove of the media sensor bracket.

To adjust the lower media sensor, complete these steps:

1. Locate the lower media sensor assembly under the rear roller (Figure 28). The sensor is a spring clip holding a circuit board.

![Figure 28 • Lower Media Sensor Location](image)

2. Slide the lower sensor until it is under the upper media sensor. Gently pull wires out as needed (wires should have a little slack).
3. If you move the sensor inward and a large loop of wire develops, remove the electronics cover from the side of the printer, and gently pull the wires through. Clamp the wires so that they do not rub any drive belts.
Adjust Printhead Pressure and Toggle Position

Printhead pressure is one factor that affects print quality. If the toggle pressure is too light or uneven, the labels and ribbon may slip.

**Important** • Print quality depends on the labels and ribbon used as well as the toggle pressure. Make sure that your labels and ribbon are right for your application.

- **Direct thermal media** does not need ribbon.
- **Thermal transfer media** needs ribbon.

### Toggle Position Adjustment

Toggle adjustment may be needed if printing is too light on one side or if thick labels are used. The toggles should be positioned so they provide even pressure on the labels. Slide the toggles to the desired location.

- If you are using a 90XiIIIPlus or 96XiIIIPlus printer, position the single toggle over the center of the labels.
- All other printer models have two toggles. If the labels are too narrow to fit both toggles, position one toggle over the center of the labels and decrease the pressure on the unused toggle.

### Printhead Pressure Adjustment

If positioning the toggles properly does not solve the problem, adjust printhead pressure. Maximize printhead life by using the lowest pressure that produces the desired print quality.

**Caution** • Observe proper electrostatic safety precautions when handling any static-sensitive components such as circuit boards and printheads.

**To adjust printhead pressure, complete these steps:**

1. Print some labels at 2.4 in. (61 mm) per second by running the *PAUSE Self Test* on page 115.

2. While printing labels, use the front panel controls to lower the darkness setting until the labels are printing gray instead of black.

3. Loosen the locking nuts at the top of the toggle assemblies (*Figure 29*). (The 90XiIIIPlus and 96XiIIIPlus printers have only one toggle.)
4. Some media types require higher pressure to print well. For these media types, increase or decrease pressure using the adjusting nuts until the left and right edges of the printed area are equally dark.

5. Increase the darkness level using the front panel controls until the printing is clear.

6. Tighten the locking nuts.
This chapter describes the print modes and other options available for the XiIIIPlus printer.

RFID-Ready Capability

You may choose to have certain models of the XiIIIPlus printer configured as RFID-ready. The standard printer is altered so that an RFID reader/antenna may be installed easily at a later date. Contact your authorized Zebra RFID reseller for more information about the RFID-ready option.

XML-Enabled Printing

The XML-Enabled Printing option offers increased flexibility and interoperability by making it possible to integrate Zebra printers quickly and easily into most Enterprise Resource Planning (ERP) systems and their applications. XML-enabled printers print directly from Oracle Warehouse Management System (WMS), Mobile Supply Chain Applications (MSCA), and many other ERP vendor applications. XML-enabled label formats upload directly to the label printer, and the XML data stream is sent via TCP/IP directly to the appropriate Zebra printer. Contact your authorized Zebra XML-Certified reseller for more information about the XML-Enabled Printing option.
Print Modes

The options on your printer may let you set up additional print modes. Use the front panel controls to set up the printer to the print mode that you wish to use.

The following are the print mode selections available through the front panel. Some of them require that the option be purchased.

- Tear-off
- Peel-off
- Cutter
- Rewind
- Applicator (used only if a machine will apply printed labels to something)

To select a print mode, complete these steps:

1. From the front panel, press SETUP/EXIT.
2. Press NEXT/SAVE until the LCD reads PRINT MODE.
3. Use the right or left oval to scroll though the choices. Be sure to select a print mode that your hardware supports—some of the selections displayed are for optional printer features.
4. To save your selection, press SETUP/EXIT.

Tear-Off Mode

See Load the Printer on page 20 to set up labels in Tear-Off Mode.
Peel-Off Mode

Peel-Off Mode (Figure 30) advances one label at a time. The printer does not print another label until the first label is removed. The TAKE LABEL light flashes until the label is removed. The backing is wound on the rewind spindle, but the rewind plate is not used.

To set up the printer in Peel-Off Mode, complete these steps:

1. Remove the rewind plate (if installed) from the front of the printer. Store it on the two mounting screws on the inside of the front panel.

2. From the front panel, select Peel-Off Mode.

3. Open the printhead.

4. Slide the media guide and media supply guide as far from the printer frame as possible.

5. Flip down the media supply guide.

6. Put the roll of media on the media hanger.

7. Push the label core toward the printer frame. The labels must be aligned with the label core.

8. Feed the media under the media guide roller and under the printhead.
9. Adjust the media supply guide so it is just touching the edge of the media.

10. When loading labels, allow approximately 36 in. (915 mm) of labels to extend past the tear-off/peel-off bar. Remove all labels from this portion to create a leader.

11. Remove the hook from the rewind spindle. If you are using a core, slide it onto the rewind spindle until it is flush against the guide plate.

12. Wind the label backing around either the 3 in. (76 mm) core or the rewind spindle and reinstall the hook.

13. Flip up the media supply guide. Slide in the media guide and media supply guide so they just touch, the edge of the labels. The labels should lie flat.

14. Before closing the printhead, make sure that:
   • The labels are positioned against the inside guides.
   • The labels are taut and parallel with the pathway when wound onto the rewind spindle or core.

15. Close the printhead.
   The backing winds on the rewind spindle or core.

16. For instructions for removing the backing from the rewind spindle, see Remove Backing or Labels from Rewind Spindle on page 51.
Cutter Mode

A cutter is a rotating knife with a self-sharpening blade that is attached to the front of the printer. The cutter is used to cut individual labels as they are printed. See www.zebra.com for more information about the Cutter option.

Figure 31 shows the printer loaded with labels in Cutter mode.

To set up the printer in Cutter Mode, complete these steps:

1. Turn the printer On (I).
2. From the front panel, select Cutter Mode.
3. Open the printhead.
4. Slide the media guide and media supply guide as far from the printer frame as possible.
5. Flip down the media supply guide.
6. Put the roll of media on the media hanger.
7. Push the label core toward the printer frame. The labels must be aligned with the label core.
8. Feed the media under the media guide roller and under the printhead.
9. Feed the labels through the cutter mechanism.

Caution • The cutter blade is sharp. Do not rub or touch the blade with your fingers.
10. Flip up the media supply guide.

11. Slide in the media guide and media supply guide so they just touch, but do not restrict, the edge of the roll.

12. Before closing the printhead, make sure that:
   • The labels are positioned against the inside guides.
   • The labels are taut and parallel with the pathway when wound onto the rewind spindle or core.

13. Close the printhead.
Rewind Mode

Rewind Mode (Figure 32) allows the media to be wound on a core after printing.

Figure 32 • Media Loaded in Rewind Mode

</tbody>
</table>

To install the rewind plate, complete these steps:

1. Remove the rewind plate from its storage location inside the printer.
2. Position the rewind plate so that the lip on the attached hook plate points down.
3. Insert the hook plate lip 1/2 in. (13 mm) into the lower slot in the side plate.
4. Align the upper end of the rewind plate with the matching slot in the side plate.
5. Slide in the rewind plate until it stops against the printer’s main frame.

Figure 33 shows the rewind plate and where it hooks to the printer.
To set up the printer in Rewind Mode, complete these steps:

1. If you have not already done so, install the rewind plate.

2. From the front panel, select Rewind Mode.

3. Open the printhead.

4. Slide the media guide and media supply guide as far from the printer frame as possible. Flip down the media supply guide.

5. Put the roll of media on the media hanger.

6. Push the label core toward the printer frame. The labels must be aligned with the label core.

7. Feed the media under the media guide roller and under the printhead.

8. Adjust the media supply guide so it is just touching the edge of the media.

9. When loading labels, allow approximately 36 in. (915 mm) of labels to extend past the printhead. Remove all labels from this portion to create a leader.

10. Remove the hook from the rewind spindle. If you are using a core, slide it onto the rewind spindle until it is flush against the guide plate.
11. Wind the label backing around either the 3 in. (76 mm) core or the rewind spindle. Reinstall the hook.

12. Flip up the media supply guide. Slide in the media guide and media supply guide so they just touch the edge of the labels. The labels should lie flat.

13. Before closing the printhead, make sure that:
   - The labels are positioned against the inside guides.
   - The labels are taut and parallel to the pathway when wound onto the rewind spindle or core.

14. Close the printhead.
    The labels wind on the rewind spindle or core.

15. For instructions for removing the backing from the rewind spindle, see Remove Backing or Labels from Rewind Spindle on page 51.
Rewind Mode with Cutter Option

Printers with the Cutter option can use the Rewind mode to print and save a roll of labels (Figure 34). See www.zebra.com for more information about the Cutter option.

**Note**: Rewind mode cannot be used with the Cutter option on 110XiIIIPlus printers.

**Figure 34 • Media Loaded in Rewind Mode with Cutter Option**

To set up the Rewind Mode for printers with the cutter option, complete these steps:

1. Turn the printer On (I).
   - The printer feeds out and cuts one label.
2. From the front panel, select Rewind Mode.
3. Remove the rewind plate from its storage location in front of the print mechanism inside the media compartment.
4. Invert the rewind plate so that the lip on the attached hook plate points down.
5. Insert the hook plate lip 1/2 in. (13 mm) into the lower opening in the side plate. Slide in the rewind plate until it stops against the printer’s main frame.

6. Insert the two small tabs on the rewind plate into the corresponding slots in the cutter support bracket. (The rewind plate should spring into the proper position.)

7. Open the printhead.

8. Slide the media guide and media supply guide as far from the printer frame as possible.

9. Flip down the media supply guide.

10. Put the roll of media on the media hanger.

11. Push the label core toward the printer frame. The labels must be aligned with the label core.

12. Feed the media under the media guide roller and under the printhead.

13. Feed the labels through the cutter mechanism.

---

**Caution •** The cutter blade is sharp. Do not rub or touch the blade with your fingers.

14. When loading labels, allow approximately 36 in. (915 mm) of labels to extend past the printhead. Remove all labels from this portion to create a leader.

15. Adjust the media supply guide so it is just touching the edge of the media.

16. Remove the hook from the rewind spindle.

17. If you are using a core, slide it onto the rewind spindle until it is flush against the guide plate.

18. Wind the label backing around either the 3 in. (76 mm) core or the rewind spindle.

19. Reinstall the hook.

20. Flip up the media supply guide.

21. Slide in the media guide and media supply guide so they just touch, but do not restrict, the edge of the roll.

22. Before closing the printhead, make sure that:
   - The labels are positioned against the inside guides.
   - The labels are taut and parallel with the pathway when wound onto the rewind spindle or core.

23. Close the printhead.
   The labels wind on the rewind spindle or core.

24. For instructions for removing the labels from the rewind spindle, see *Remove Backing or Labels from Rewind Spindle* on page 51.
Remove Backing or Labels from Rewind Spindle

Rewind mode and Peel-Off mode use the rewind spindle. The label backing or printed labels must be removed every time you change labels for the printer to work correctly.

Important • It is not necessary to turn off the power to remove backing from the rewind spindle. If power is turned off, all label formats and images, as well as any temporarily saved parameter settings stored in the printer’s internal memory, are lost. When power is turned back on, these items must be reloaded.

To remove label backing from the rewind spindle, complete these steps:

1. Have the labels run out?

<table>
<thead>
<tr>
<th>If...</th>
<th>Then...</th>

Overview

After you have installed media and ribbon and printed a configuration label, you can change the printer’s settings using the front panel controls. For an overview of the front panel, including descriptions of the buttons and lights, see Front Panel on page 3. If you need to restore the printer to its factory default settings, see FEED and PAUSE Self Test on page 117.

Many printer settings may be controlled by your printer’s driver or label preparation software. Refer to the driver or software documentation for more information.

Note • Printers that are operating on an IP network can be quickly configured in the following ways:
  • with ZebraLink™ WebView (ZebraNet® PrintServer II or 10/100 Print Server required). For information, see the ZebraNet Networking: PrintServer II Installation and User Guide or the ZebraNet 10/100 Print Server User and Reference Guide.
  • with the SetWLAN configuration utility (ZebraNet Wireless Print Server required). For information, see the ZebraNet Wireless Print Server User Guide.

Enter Setup Mode

To enter Setup Mode, complete these steps:

1. Press SETUP/EXIT to enter Setup Mode.
2. Press either NEXT/SAVE or PREVIOUS to scroll through the parameters.
Exit Setup Mode

To leave Setup Mode, complete these steps:

1. Press SETUP/EXIT.

   The LCD displays SAVE CHANGES.

2. Press the left or right oval to display the save options (Table 4).

   Table 4 • Save Options When Leaving Setup Mode

<table>

<td>Sets the wired and wireless network settings back to factory defaults.</td>
</tr>
</tbody>
</table>

3. Press NEXT/SAVE to select the displayed choice.

   When the configuration and calibration sequence is done, PRINTER READY displays.
Password-Protected Parameters

Certain parameters are password-protected by factory default, including the communication parameters.

**Note** • If the parameters are set incorrectly, the printer may function unpredictably.

The first attempt to change a password-protected parameter (pressing one of the ovals) requires you to enter a four-digit password at the ENTER PASSWORD display. The left oval changes the selected digit position; the right oval increases the selected digit value. After entering the password, press NEXT/SAVE. The parameter you wish to change is displayed. If the password was entered correctly, you can now change the value.

The first time that you attempt to change a password-protected parameter, the printer displays ENTER PASSWORD. Before you can change the parameter, you must enter the four-digit password. After you have entered the password correctly, you do not have to enter it again unless you leave Setup Mode by pressing SETUP/EXIT or by turning the printer Off (O).

**To Enter a Password for a Password-Protected Parameter, complete these steps:**

1. At the password prompt, use the left oval to change the selected digit position.
2. When you have selected the digit that you wish to change, use the right oval to increase the selected digit value. Repeat these two steps for each digit of the password.
3. After entering the password, press NEXT/SAVE.

   The parameter you selected to change is displayed. If the password was entered correctly, you can change the value.

**Default Password Value**

The default password value is 1234. The password can be changed using the ^KP (Define Password) ZPL II instruction or through ZebraLink™ WebView (ZebraNet® PrintServer II, 10/100 Print Server, or Wireless Print Server required).

**Disable the Password Protection Feature**

You can disable the password protection feature so that it no longer prompts you for a password by setting the password to 0000 via the ^KPØ ZPL/ZPL II command. To reenable the password-protection feature, send the ZPL/ZPL II command ^KPx, where x can be any number from 1 to 9999.
**Front Panel LCD**

Use the LCD display on the front panel to adjust printer settings. Table 5 shows parameters in the order in which they are displayed when you press NEXT/SAVE after entering setup mode. Throughout this process, press NEXT/SAVE to continue to the next parameter, or press PREVIOUS to return to the previous parameter in the cycle. Table 6 on page 73 shows the additional parameters that appear when a wired or wireless print server is installed in the printer.

### Table 5 • Printer Parameters (Sheet 1 of 16)

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Action/Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DARKNESS</strong></td>
<td>Adjusting Print Darkness</td>
</tr>
<tr>
<td>Darkness settings depend on a variety of factors, including ribbon type, labels, and the condition of the printhead. You may adjust the darkness for consistent high-quality printing. If printing is too light, or if there are voids in printed areas, you should increase the darkness. If printing is too dark, or if there is spreading or bleeding of printed areas, you should decrease the darkness. Darkness settings also may be changed by the driver or software settings. The FEED Self Test described in FEED Self Test on page 116 can also be used to determine the best darkness setting. Because the darkness setting takes effect immediately, you can see the results on labels that are currently printing. <strong>Important</strong> • Set the darkness to the lowest setting that provides good print quality. If the darkness is set too high, the ink may smear, the ribbon may burn through, or the printhead may wear prematurely. • Press the right oval to increase darkness. • Press the left oval to decrease darkness. <strong>Default:</strong> +4 <strong>Range:</strong> 0 to +30.0</td>
<td></td>
</tr>
<tr>
<td><strong>PRINT SPEED</strong></td>
<td>Adjusting Print Speed</td>
</tr>
<tr>
<td>Slower print speeds typically yield better print quality. Print speed changes take effect upon exiting the menu mode. • Press the right oval to increase print speed. • Press the left oval to decrease print speed. <strong>Default:</strong> 2 ips <strong>Range:</strong> 2 ips to +12 ips (depends on specific printer)</td>
<td></td>

</table>
### Front Panel Controls

**Front Panel LCD**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Action/Explanation</th>
</tr>
</thead>
</table>
| **PRINT MODE**     | Selecting Print Mode  
Print mode settings tell the printer the method of label delivery that you wish to use. Be sure to select a print mode that your hardware configuration supports because some of the selections displayed are for optional printer features.  
- Press either oval to display choices.  
**Default:** Tear-Off  
**Selections:** Tear-Off, Peel-Off, Cutter, Applicator, Rewind  
**Note** • Only Tear-Off mode is supported. |
| **MEDIA TYPE**      | Setting Media Type  
This parameter tells the printer the type of media that you are using. Selecting continuous media requires that you include a label length instruction in your label format (\^LLxxxx if you are using ZPL or ZPL II).  
When non-continuous media is selected, the printer feeds media to calculate label length (the distance between two recognized registration points of the inter-label gap, webbing, or alignment notch or hole).  
- Press either oval to display choices.  
**Default:** Continuous  
**Selections:** Continuous, Non-Continuous |
| **SENSOR TYPE**    | Setting the Sensor Type  
This parameter tells the printer whether you are using media with a web (gap/space between labels, notch, or hole) to indicate the separations between labels or if you are using media with a black mark printed on the back. If your media does not have black marks for registration on the back, leave your printer at the default (web).  
- Press either oval to display other choices.  
**Default:** Web  
**Selections:** Web, mark |
| **PRINT METHOD**   | Selecting Print Method  
The print method parameter tells the printer the method of printing that you wish to use: direct thermal (no ribbon) or thermal transfer (using thermal transfer media and ribbon).  
- Press either oval to display choices.  
**Default:** Thermal transfer  
**Selections:** Thermal transfer, direct thermal  
**Note** • Selecting direct thermal when using thermal transfer media and ribbon creates a printer error condition, but printing continues. |
### PRINT WIDTH

**Setting Print Width**

Print width determines the printable area across the width of the label.

To change value shown:

1. Press the left oval to move the cursor.
2. Press the right oval to increase the value of the digit.

**Note** • The printer does not accept any value larger than the maximum print width listed in General Specifications on page 122.

To change the unit of measurement:

a. Press the left oval until the unit of measurement is active.

b. Press the right oval to toggle to a different unit of measure (mm, inches, or dots).

**Default Range:** The default and range of acceptable values vary depending on what printer you have. See General Specifications on page 122 for further information about the ranges available for your model.

### MAXIMUM LENGTH

**Setting Maximum Length**

Maximum length is used in conjunction with the calibration procedure. The value of this setting is the maximum label length that is used during the media portion of the calibration process. Only a few labels are required to set media sensors. Always set the value that is at least 1 in. (25.4 mm) longer than the longest label to be used on the printer.

- To increase the value, press the right oval.
- To decrease the value, press the left oval.

**Default Range:** The default and range of acceptable values vary depending on your printer’s configuration. Values are adjustable in 1 in. (25.4 mm) increments.

| EARLY WARNING     | Setting Early Warning  
When this parameter is enabled, the printer provides warnings when labels or ribbons are running low or when the printhead needs to be cleaned.  
**Note** • Labels per roll and ribbon length need to be updated when beginning use of the Early Warning System. Also, the printer does not make any adjustments when power is turned off and on.  
• Press the right or left oval to display other choices.  
**Default:** MEDIA DISABLED, RIBBON DISABLED, MAINTENANCE DISABLED  
**Selections:** MEDIA DISABLED, MEDIA ENABLED, RIBBON DISABLED, RIBBON ENABLED, MAINTENANCE DISABLED, MAINTENANCE ENABLED  
To change the Early Warning settings,  
1. When the LCD displays **EARLY WARNING**, press the right or left oval until the desired setting is listed on the LCD. (If you are prompted for a password, enter your password using the instructions in **Password-Protected Parameters** on page 56.)  
2. Press **NEXT/SAVE** to access the next early warning option.  
3. Repeat this process to set the early warning for ribbon or maintenance (printhead cleaning).  
When the printer detects that less than 15% of the labels or ribbon remain, **WARNING MEDIA LOW** or **WARNING RIBBON LOW** appears on the LCD. If the alert function has been enabled, an alert is also sent. When the printhead is opened then closed after a media or ribbon warning has been received, the LCD prompts with **MEDIA REPLACED?** or **RIBBON REPLACED?**. Press the right oval to select **YES** to clear the warning and reset the label counter.  
When setting the Early Warning for maintenance, the LCD prompts **HEAD CLEAN?**.  
4. Press the right oval to select **YES**.  
5. Press **SETUP/EXIT** to exit setup mode.  
6. Press **NEXT/SAVE** to save changes.  

| LABELS PER ROLL | Setting Labels Per Roll  
This parameter needs to be updated when setting the Early Warning System so the printer can provide early warnings when labels are running low.  
• Press the right or left oval to display other choices.  
**Default:** 900 labels  
**Range:** 100 labels to 9999 labels  

| RIBBON LENGTH  | Setting Ribbon Length  
This parameter must be updated when setting the Early Warning System so the printer can provide early warnings when ribbon is running low.  
• Press the right or left oval to display other choices.  
**Default:** 450 m  
**Range:** 100 m to 450 m

</table>
| INIT FLASH MEM | Initialize Flash Memory  
  **Caution** • Perform this operation only when it is necessary to erase all previously stored information from Flash memory.  
  1. When the LCD displays **INITIALIZE CARD**, press the right oval to select **YES**. (If you are prompted for a password, enter your password using the instructions in **Password-Protected Parameters** on page 56.)  
     The LCD asks **INITIALIZE FLASH**.  
  2. Press the right oval to select **YES**.  
     The LCD asks **ARE YOU SURE?**.  
  3. Do you wish to continue?  
     • Press the left oval to select **NO** to cancel the request and return to the **INIT FLASH MEM** prompt.  
     • Press the right oval to select **YES** and begin initialization.  
     When formatting is complete, **INIT FLASH MEM** displays. |

| SENSOR PROFILE | Sensor Profile  
  The media sensor profile may be used to troubleshoot registration problems that may be caused when the media sensor detects preprinted areas on the media or experiences difficulty in determining web location.  
  • Press the right oval to start this standard calibration procedure and print a media sensor profile.  
  **Figure 35** shows a media sensor profile. If the sensitivity of the media and/or ribbon sensors must be adjusted, use **Calibrate Media and Ribbon Sensors** on page 63 to adjust the media and ribbon sensor sensitivity. |

**Figure 35 • Media Sensor Profile**
Calibrate Media and Ribbon Sensors

Use this procedure to adjust sensitivity of media and ribbon sensors.

**Important** • This procedure must be followed exactly as presented. All of the steps must be performed even if only one of the sensors requires adjustment. You may press the left oval at any step in this procedure to cancel the procedure.

1. Press the right oval to start the calibration procedure.
   
   The **LOAD BACKING** prompt displays.

2. Open the printhead.

3. Remove approximately 8 in. (203 mm) of labels from the backing, and pull the media into the printer so that only the backing is between the media sensors.

4. Leave the printhead open.

5. Press the right oval to continue.
   
   The **REMOVE RIBBON** prompt displays.

6. Remove the ribbon.

7. Close the printhead.

8. Press the right oval to continue.
   
   The message **CALIBRATING PLEASE WAIT** displays.

   The printer adjusts the scale (gain) of the signals that it receives from the media and ribbon sensors. On the sensor profile, this essentially corresponds to moving the peak of the graph up or down to optimize the readings for your application.

   When calibration is complete, **RELOAD ALL** displays.

9. Open the printhead and pull the media forward until a label is positioned under the media sensor.

10. Reload the ribbon.

11. Close the printhead.

12. Press the right oval to continue.
   
   The printer does a calibration equivalent to pressing **CALIBRATE**; during this process, the printer determines the label length. To see the new readings on the new scale, print a sensor profile.

## Front Panel Controls

### Front Panel LCD

#### Adjusting Label Top Position

The label top position adjusts the print position vertically on the label. Positive numbers adjust the label top position further down the label (away from the printhead), negative numbers adjust the position up the label (toward the printhead). The displayed value represents dots.

- To increase the value, press the right oval.
- To decrease the value, press the left oval.

**Default:** +0  
**Range:** –120 to +120 dot rows

#### Adjusting Left Position

This parameter establishes how far from the left edge of a label the format begins to print by adjusting horizontal positioning on the label. Positive numbers adjust the printing to the left by the number of dots selected, negative numbers shift printing to the right. The displayed value represents dots.

1. Press the left oval to move the cursor.
2. Press the right oval to change between + and to increase the value of the digit.
3. For a negative value, enter the value before changing to the minus sign.

**Default:** 0000  
**Range:** –9999 to +9999

### Table 5 • Printer Parameters (Sheet 12 of 16)

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Action/Explanation</th>
</tr>
</thead>
</table>
| LABEL TOP      | Adjusting Label Top Position  
|                | The label top position adjusts the print position vertically on the label. Positive numbers adjust the label top position further down the label (away from the printhead), negative numbers adjust the position up the label (toward the printhead). The displayed value represents dots.
|                | • To increase the value, press the right oval.
|                | • To decrease the value, press the left oval.  
|                | **Default:** +0  
|                | **Range:** –120 to +120 dot rows |
| LEFT POSITION  | Adjusting Left Position  
|                | This parameter establishes how far from the left edge of a label the format begins to print by adjusting horizontal positioning on the label. Positive numbers adjust the printing to the left by the number of dots selected, negative numbers shift printing to the right. The displayed value represents dots.  
|                | 1. Press the left oval to move the cursor.  
|                | 2. Press the right oval to change between + and to increase the value of the digit.  
|                | 3. For a negative value, enter the value before changing to the minus sign.  
|                | **Default:** 0000  
|                | **Range:** –9999 to +9999 |
### Setting the Head Test Count

The printer periodically performs a test of the printhead functionality, called a **printhead test** or **head test**. This parameter establishes how many labels are printed between these internal tests.

1. Press the left oval to move to the next digit position.
2. Press the right oval to increase the value of the digit.

**Default:** 0000 (disables the test)

**Range:** 0000 to 9999

**Note** • This parameter will only appear if the Head Test Count option is installed.

For 110XiIIIPlus printers, look at the configuration label to see if the option is installed. This option is available only on the BP-360X-Plus II.

## Front Panel Controls

### Front Panel LCD

### LCD ADJUST
**LCD Adjustment**
This parameter allows you to adjust the contrast of your LCD if it is difficult to read.
1. Press the left oval to move the cursor.
2. Press the right oval to toggle +/- or to increase the value of the digit.

**Range:** 00 to 19

### FORMAT CONVERT
**Format Convert**
Selects the bitmap scaling factor. The first number is the original dots per inch (dpi) value; the second, the dpi to which you would like to scale.

**Note**: Not applicable on all printers.
- Press the right or left oval to display other choices.

**Default:** None

**Selections:** None, 150 → 300, 150 → 600, 200 → 600, 300 → 600

### IDLE DISPLAY
**Idle Display**
This parameter selects the LCD options for the real-time clock.

**Note**: If the default value is not selected, pressing either oval briefly displays the firmware version of the printer.
- Press the right or left oval to display other choices.

**Default:** Firmware version

**Selections:** mm/dd/yy (24 hour), mm/dd/yy (12 hour), dd/mm/yy (24 hour), dd/mm/yy (12 hour)

### RTC DATE
**RTC (Real-time clock) Date**
This parameter allows you to set the date following the convention selected in IDLE DISPLAY.
1. Press the left oval to move to the next digit position.
2. Press the right oval to increase the value of the digit.

### RTC TIME
**RTC (Real-time clock) Time**
This parameter allows you to set the time following the convention selected in IDLE DISPLAY.
1. Press the left oval to move to the next digit position.
2. Press the right oval to increase the value of the digit.

### LANGUAGE
**Selecting the Display Language**
This parameter allows you to change the language used on the LCD.
- Press the right or left oval to display other choices.

**Default:** English

**Selections:** English, Spanish, French, German, Italian, Norwegian, Portuguese, Swedish, Danish, Spanish 2, Dutch, Finnish, Japanese

ZebraNet® Wired and Wireless Print Server LCD Displays

The menu options shown in Table 6 display only if you have the ZebraNet PrintServer II, or 10/100 PrintServer, or Wireless Print Server installed.

**Table 6 • Print Server LCD Displays**

<table>
<thead>
<tr>
<th>LCD</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| LOAD LAN FROM<sup>1</sup> | This parameter, which serves the same function as the ^NP ZPL command, specifies whether to use the printer’s or the print server’s IP settings at bootup.  
*Accepted Values:* PRINTER, PRINTSERVER  
*Default Value:* PRINTER |
| WIRED PS CHECK<sup>1</sup> | This parameter, which serves the same function as the ^NB ZPL command, tells the printer whether to search for a wired print server at bootup.  
*Accepted Values:* YES, NO  
*Default Value:* NO |
| IP PROTOCOL<sup>2</sup> | **IP Protocol**  
Allows either the user (permanent) or the server (dynamic) to select the IP address.  
If a dynamic option is chosen, this selection determines the method(s) by which the print server (wired or wireless) receives the IP address from the server.  
• Press the right or left oval to display other choices.  
*Default:* ALL  
*Selections:* ALL, GLEANING ONLY, RARP, BOOTP, DHCP, DHCP AND BOOTP, PERMANENT  
*Note:* Use of GLEANING ONLY is not recommended when the Wireless Print Server is installed. |
| IP ADDRESS<sup>2</sup> | **IP Address**  
This parameter allows you to select the IP address if PERMANENT was chosen in IP PROTOCOL. (If a dynamic option was chosen, the user cannot select the address.)  
1. Press the left oval to move to the next digit position.  
2. Press the right oval to increase the value of the digit. |
| SUBNET MASK<sup>2</sup> | **Subnet Mask**  
This parameter selects the part of the IP address that is considered to be part of the local network. It can be reached without going through the default gateway.  
1. Press the left oval to move to the next digit position.  
2. Press the right oval to increase the value of the digit. |

1 Appears only when the ZebraNet Wireless Print Server is installed.  
2 These parameters appear after the system recognizes the existence of a ZebraNet print server (wired or wireless). After the print server is recognized, all zeroes (000.000.000.000) will display until the printer obtains an IP address or defaults to address 192.168.254.254.  
3 If a wireless password is set, you must enter the wireless password (not the printer password) to access this parameter.  
4 This parameter appears 1) when no wireless card is inserted or 2) when the wireless card is associated to the WLAN and the card supports LEAP.

This chapter describes the standard communication ports available to connect the printer to your computer or network.

Contents

- Parallel Port ......................................................... 76
- Serial Port ........................................................... 78
  - Serial Pin Configuration ........................................... 79
  - RS-232 Interface Connections .................................... 80
  - RS-422/RS-485 Interconnections ................................. 82
- USB 2.0 Port ........................................................... 83
Parallel Port

When communicating via the parallel port, the values selected must be the same as those used by the host equipment connected to the printer. Port selection for status information is determined by the channel sending the request. The parallel port can be set for bidirectional or unidirectional communication. The default setting is bidirectional.

A standard 36-pin parallel connector (Figure 36) is available on the back of the printer for connection to the data source.

Table 7 shows the pin configuration and function of a standard computer-to-printer parallel cable.

<table>

| 36                | NSelectin/1284 active |
Serial Port

To communicate using the serial data port of the printer, you must choose the number of data and stop bits, parity, and handshaking. Parity applies only to data transmitted by the printer because the parity of received data is ignored.

The values selected must be the same as those used by the host equipment connected to the printer. Default settings are 9600 baud, 8 data bits, 1 stop bit, no parity, and XON/XOFF.

Connect the serial data cable to the female DB-9 connector (Figure 37) on the back panel of the printer.

![Figure 37 • Serial Connector](image)

Use a DB-9 to DB-25 interface module for all RS-232 connections through a DB-25 cable. An interface module is required for RS-422/RS-485 interface support (see RS-422/RS-485 Interconnections on page 82).

**Note** • For all RS-232 input and output signals, the printer follows the specifications of the Electronics Industries Association (EIA) RS-232 and the Consultative Committee for International Telegraph and Telephone (CCITT) V.24.
Serial Pin Configuration

Table 8 shows the pin configuration and function of the rear panel serial data connector on the printer.

The maximum current draw may be limited by option configuration.
RS-232 Interface Connections

**Note** • Adapters are available from Zebra Technologies LLC.
- RS-422/RS-485 adapter, Zebra part number 33114M
- RS-232 DB-9 to DB-25 adapter, Zebra part number 33109M

**Direct Connection to a Computer**

The printer is configured as Data Terminal Equipment (DTE).

**Note** • Use a null modem (crossover) cable to connect the printer to a computer or any other DTE device.

Figure 38 shows the internal connections of the printer’s RS-232 connector.

**Figure 38 • RS-232 Connections**

RS-232 Connector (DTE)
Rear Panel Female DB-9

2 RXD (receive data) input
3 TXD (transmit data) output
4 DTR (data terminal ready) output
5 SG (signal ground)
6 DSR (data set ready) input
7 RTS (request to send) output
8 CTS (clear to send) input
9 +5 VDC signal source

NOTE: Pin 1 is unused and unterminated.

Pin 9 is also available as a +5 VDC signal source at 750 mA. The maximum current draw may be limited by option configuration.

**Caution** • To enable this capability, a qualified service technician must install a jumper on the printer’s main logic board on JP1, pins 2 and 3.
**DB-9 to DB-25 Connections**

An interface adapter is required (Zebra part number 33109M) to connect the printer’s DB-9 interface to a DB-25 connector. A generic DB-25 adapter CAN be used, although the +5 VDC signal source would not be passed through the adapter.

Figure 39 shows the connections required for the DB-9 to DB-25 interface.

---

**Figure 39 • DB-9 to DB-25 Connections**

![Diagram of DB-9 to DB-25 Connections]

**NOTE:** Pin 1 of DB-9 connector is unused and unterminated.

---

**Modem Connection**

When the printer is connected via its RS-232 interface to Data Communication Equipment (DCE) such as a modem, use a standard RS-232 (straight-through) interface cable.

Figure 40 shows the connections required for this cable.

---

**Figure 40 • RS-232 Connections**

![Diagram of RS-232 Connections]

**NOTE:** Pin 1 is unused and unterminated at the printer.
RS-422/RS-485 Interconnections

**Caution** • A qualified service technician must install a jumper on the printer’s main logic board at JP1, pins 2 and 3, for the RS-422/RS-485 interface adapter to function properly.

An interface adapter (Zebra part number 33114M) is required to connect the printer’s RS-232 DB-9 interface to a host computer through an RS-422 or RS-485 interface. A generic DB-25 adapter can be used. Figure 41 shows the cable wiring for interconnecting the DB-9 to the interface adapter’s DB-25 female connector.

**Figure 41 • DB-9 to DB-25 Connections**

![Diagram of female DB-25 connector on RS-422/RS-485 adapter]

**NOTE:** Pins 2–8, 10, 12, 15, 17, 18, and 20–25 are unused and unterminated.
USB 2.0 Port

A USB 2.0 port (which is USB 1.1 and 1.0 compatible) is available to connect your printer to the host equipment. The industry-standard USB cable has an A-male connector on one end and a B-male connector on the other end as shown in Figure 42.

Figure 42 • USB Connectors

Note • Use a USB 2.0-certified compliant cable no longer than 16.4 ft (5 m) long. A cable that meets these requirements is available from Zebra (part number 33011).
Data Ports
USB 2.0 Port

This chapter describes the optional cards that can be used with the printer and gives instructions for installation.

Contents

PCMCIA Memory Card ................................................................. 86
CompactFlash Card ................................................................. 88
PCMCIA Memory Card

A Type I- or Type II-compliant PCMCIA memory card holds extra memory or font options for the printer. The card is hot-swappable (it can be installed while the printer is on).

**Electrostatic Discharge Caution** • Observe proper electrostatic safety precautions when handling any static-sensitive components such as circuit boards and printheads.

To install the PCMCIA card, complete these steps:

1. Remove the PCMCIA card shield from the rear of the printer (Figure 43).

2. Insert the PCMCIA card, with the notch **up**, into the card slot as shown. Insert it far enough to make the eject button pop out.
3. Reinstall the PCMCIA card shield over the PCMCIA card and card slot.

Note • The PCMCIA card may take a few minutes to initialize. The PAUSE light flashes while the card initializes. If the card is already initialized, the PAUSE light flashes only once or twice after the card is installed.

The printer is ready to operate with the additional memory or font option. To be sure that the card has successfully initialized, print a configuration label as instructed in Print a Printer Configuration Label on page 29 and review it to see whether the new memory card information is listed.
Memory Cards
CompactFlash Card

CompactFlash Card

A CompactFlash card is a nonvolatile memory card that stores data even when the power to the printer is turned off. A Type I-compliant CompactFlash card holds extra memory or optional fonts for your printer.

**Caution** • This procedure should only be performed by qualified service technicians.

**Electrostatic Discharge Caution** • Observe proper electrostatic safety precautions when handling any static-sensitive components such as circuit boards and printheads.

**To install a CompactFlash card, complete these steps:**

1. Turn the AC power Off (O).
2. Disconnect the AC power cord from the printer.
3. Remove the two screws near the bottom of the electronics cover (Figure 44).

**Figure 44 • Printer Exterior**

<table>
<thead>
<tr>
<th>1</th>
<th>Electronics cover</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>Screws</td>
</tr>
<tr>
<td>3</td>
<td>Channel</td>
</tr>
<tr>
<td>4</td>
<td>Lip of cover</td>
</tr>
</tbody>
</table>

4. Lift the electronics cover at the rear top corner. Pull the corner forward and up, then lift the cover up and away from the printer.
5. Insert the CompactFlash card into the card slot on the upper portion of the option board. Insert the card with the back (unlabeled) side of the card facing out. The card can be inserted only one way and should snap into place. Figure 45 shows where to insert the CompactFlash card.

![Figure 45 • Compact Flash Card Insertion](image)

6. Reinstall the electronics cover by lowering the cover so the lip of the cover goes into the channel on the top of the printer.

7. Secure the cover by reinstalling the two screws near the bottom of the cover.

8. Reconnect the printer AC power cord.

9. Press and hold CANCEL while turning the printer On (I). The printer prints a configuration label.

10. Check for the presence of additional memory or optional fonts by looking at the information on the configuration label.

**Note** • The CompactFlash card may take a few minutes to initialize. If the process is not successfully completed within 10 minutes, contact Technical Support at http://www.zebra.com/SS/service_support.htm for assistance.
Routine Maintenance

Cleaning your printer regularly maintains print quality and may extend the life of the printer. This section provides routine cleaning and maintenance procedures.

Contents

Cleaning Schedule ................................................................. 92

</tr>
</tbody>
</table>

* Use Zebra’s Preventative Maintenance kit, part number 47362, or a solution of 90% isopropyl alcohol and 10% deionized water.

† For 600 dpi printers, use Zebra’s Save-a-Printhead cleaning film. This specially coated material removes contamination buildup without damaging the printhead. Call your authorized Zebra reseller or distributor for more information.

Clean Exterior

Clean the outside surfaces of the printer with a lint-free cloth. Use a mild detergent solution or desktop cleaner sparingly, as needed.

Caution • Do not use harsh or abrasive cleaning agents or solvents.
Clean Interior

After every four rolls of media, inspect the inside of the printer. Use a soft bristle brush or a vacuum cleaner to remove any dirt and lint from the interior of the printer.

Printhead and Platen Roller

After every roll of ribbon, clean the printhead. Clean the printhead more often if you see inconsistent print quality, such as voids in the bar code or graphics.

For 200 and 300 dpi printers  Clean after every roll (1500 feet or 450 m) of thermal transfer ribbon or after every roll (500 feet or 150 m) of direct thermal labels or when CLEAN HEAD NOW appears on the LCD.

For 600 dpi printers  Clean after each roll (500 feet or 150 m) of labels or when CLEAN HEAD NOW appears on the LCD.

Note • You do not need to turn off the printer before cleaning the printhead. If power is turned off, all label formats and images, as well as any temporarily saved parameter settings stored in the printer’s internal memory, are lost. When power is turned back on, these items must be reloaded.

If power is removed from a 600 dpi printer when cleaning the printhead, the CLEAN HEAD NOW warning shown on the LCD will not disappear.

If print quality does not improve after you perform this procedure, clean the printhead with Save-a-Printhead cleaning film. This specially coated material removes contamination buildup without damaging the printhead. Call your authorized Zebra reseller or distributor for more information.

Caution • The printhead is hot and can cause severe burns. Allow the printhead to cool.

Caution • Observe proper electrostatic safety precautions when handling any static-sensitive components such as circuit boards and printheads.

To clean the printhead and platen roller, complete these steps:

1. Open the printhead.
2. Remove the media and ribbon (if loaded).
3. Use Zebra’s Preventative Maintenance kit, part number 47362, or a solution of 90% isopropyl alcohol and 10% deionized water on an applicator to wipe along the print elements from end to end, as shown in Figure 46. (The print elements are on the brown strip on the printhead.) Allow a few seconds for the solvent to evaporate.
### Routine Maintenance

#### Clean Interior

**Figure 46 • Cleaning the Printhead**

<p>| | |</p>
<table>
<thead>
<tr>

<td>Applicator</td>
</tr>
<tr>
<td>2</td>
<td>Platen roller</td>
</tr>
<tr>
<td>3</td>
<td>Printhead print elements</td>
</tr>
<tr>
<td>4</td>
<td>Printhead lever</td>
</tr>
</tbody>
</table>

4. Rotate the platen roller and clean thoroughly with solvent and an applicator.
5. Brush or vacuum any accumulated paper lint and dust away from the rollers.
6. Reload the media and the ribbon (if required).
7. Close the printhead.
Sensors

Brush or vacuum any accumulated paper lint and dust off the sensors whenever the sensors are blocked. At minimum, clean the sensors according to the recommendations in Cleaning Schedule on page 92.

Ribbon and Label-Available Sensor Locations

The ribbon sensor and optional label-available sensor are shown in Figure 47.

Figure 47 • Sensor Locations

</tr>
</tbody>
</table>
Transmissive (Media) Sensor Locations

The locations of the upper and lower transmissive (media) sensors are shown in Figure 48 and Figure 49.

Figure 48 • Upper Media Sensor

Figure 49 • Lower Media Sensor
Snap Plate

Clean the snap plate when label adhesive or a label is stuck to the underside.

The snap plate in your printer will depend on whether the printer is RFID-ready. Figure 50 shows the standard snap plate. Figure 51 shows the snap plate in a printer that is RFID-ready. Follow the instructions that apply to your printer.

Standard Printers

Figure 50 • Snap Plate for Standard XilllPlus Printers

To clean the snap plate in a standard printer, complete these steps:

1. Insert a small-blade screwdriver or similar tool into the loop on the left side of the snap plate.

   **Important** • Take care not to bend, twist, or otherwise deform the loops. If the snap plate is damaged in any way, you may need a new plate for proper ribbon sensing.

2. Gently lift the left side of the snap plate.

3. Insert a small-blade screwdriver or similar tool into the loop on the right side of the snap plate.

4. Gently lift the right side of the snap plate.

5. Remove the snap plate from the printer.

6. Clean the snap plate with cleaning solvent and a soft cloth.
7. To reinstall the snap plate, insert the two tabs on the bottom of the snap plate into the two slots of the media path.

8. Slide the snap plate toward you.

9. Press down on the loops to lock the snap plate into place.

**RFID-Ready Printers**

**Figure 51 • Snap Plate for RFID-Ready XiiiIIPlus Printers**

To clean the snap plate in an RFID-ready printer, complete these steps:

1. Remove the two screws that secure the snap plate to the antenna support frame.

   **Important** • Do not remove the antenna support screws.

2. Remove the snap plate from the printer.

3. Clean the snap plate with cleaning solvent and a soft cloth.

4. To reinstall the snap plate, slide it back into place until the screw holes on the snap plate line up with the screw holes in the antenna support frame.

5. Reinstall the two snap plate screws to secure the snap plate to the antenna support frame.
If the cutter is not cutting the labels cleanly or if it jams with labels, clean the cutter.

Caution • The cutter blade is sharp. Do not touch or rub the blade with your fingers.

To clean the cutter, complete these steps:

1. Turn Off (O) the printer.
2. Unplug the power cord.
3. Clean the stationary cutter blade with solvent.
   If this does not remove label fragments and adhesive, contact an authorized service technician.
Replace Fuse

Fuses are user-replaceable in the 90XiIIIPlus, 96XiIIIPlus, 140XiIIIPlus, 170XiIIIPlus, and 220XiIIIPlus printers. The 110XiIIIPlus fuse must be replaced only by an authorized service technician.

**Caution** • Turn the AC power switch Off (O) and remove the power cord before performing this procedure.

The printer uses a metric-style fuse (5 × 20 mm IEC) rated at F5A, 250 V. The AC power entry module comes with two approved fuses in the fuse holder: one is in-circuit, and the second is provided as a spare. The end caps of the fuse must bear the certification mark of a known international safety organization.

To replace a faulty fuse, complete these steps:

1. Use a small-blade screwdriver or similar tool to remove the fuse holder.
   
   The fuse holder is part of the AC power entry module at the rear of the printer (Figure 52).

   **Figure 52 • AC Power Entry Module**

   ![Figure 52](image)

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>2</td>
<td>Fuse holder</td>
</tr>
<tr>
<td>3</td>
<td>AC power entry module</td>
</tr>
<tr>
<td>4</td>
<td>Small-blade screwdriver</td>
</tr>
</tbody>
</table>

2. Remove the faulty fuse and install a new fuse in the in-circuit position (Figure 53).

   **Important** • If you use the spare fuse, be sure to order a replacement fuse from your authorized Zebra distributor. The spare fuse should be the exact type and rating as the original in-circuit fuse.
3. Snap the fuse holder back into the AC power entry module.

4. Reconnect the power cord, and turn the printer On (I).

**Note** • If the printer does not power on, an internal component failure may have occurred, and the printer requires servicing by an authorized service technician.
Routine Maintenance
Replace Fuse

Troubleshooting

If an error condition exists with the printer, review this checklist:

- Is there an error message on the LCD? If yes, see *LCD Error Messages on page 105* for more information.
- Is the CHECK RIBBON light on when ribbon is loaded properly, or are non-continuous labels being treated as continuous labels? If yes, see *Media and Ribbon Sensor Calibration on page 33*.
- Are you experiencing problems with print quality? If yes, see *Print Quality Problems on page 109*.
- Are you experiencing communications problems? If yes, see *Communications Problems on page 111*.

If the labels are not printing or advancing correctly, review this checklist:

- Are you using the correct type of labels? Review the types of label in *Types of Media on page 14*.
- Review the label- and ribbon-loading illustrations, starting with *Load the Printer on page 20*.
- Check the position of the media sensor and move if necessary, as shown in *Adjust and Calibrate Sensors on page 33*.
- Does the printhead need to be adjusted? See *Adjust Printhead Pressure and Toggle Position on page 37* for more information.
- Do the sensors need to be calibrated? See *Media and Ribbon Sensor Calibration on page 33* for more information.

If none of the above suggestions correct the problem, review this checklist:

- Perform one or more of the self-tests given in *Printer Diagnostics on page 113*. Use the results to help identify the problem.
- If you are still having problems, see *Support on page xviii* for customer support information.
# LCD Error Messages

The LCD displays messages when there is an error. See Table 10 for LCD errors, the possible causes, and the recommended solutions.

<td>One or more of the printhead elements failed the printhead element test.</td>
<td>• If the failed elements affect your printing application, replace the printhead.</td>
</tr>
<tr>
<td>BAD</td>
<td></td>
<td>• To override this error, disable the head test count feature on the front panel by defaulting the value to 0000.</td>
</tr>
</tbody>
</table>

**Note** • This error message is possible only if the Head Test Count option is installed. For 110XiIIIPlus printers, look at the configuration label to see if the option is installed.

---

### RIBBON IN

Ribbon is loaded, but the printer is set for Direct Thermal mode.

- To operate in Direct Thermal mode, remove the ribbon.
- To operate in Thermal Transfer mode, leave the ribbon loaded and change the print method to Thermal Transfer. See Selecting Print Method on page 58.
- Ensure that the printer driver and/or software settings are correctly set (if applicable).

Table 12 • Communications Problems (Continued)

| Problem                                           | Possible Cause                                               | Recommended Solution                                      |
|                                                  |                                                              |                                                          |
| The printer fails to calibrate or detect the top of the label. | The printer was not calibrated for the label being used. | Perform the calibration procedure in CANCEL Self Test on page 114. |
|                                                  | The printer is configured for continuous media.               | Set the media type to non-continuous media. See Setting Media Type on page 58. |
|                                                  | The driver or software configuration is not set correctly.    | Driver or software settings produce ZPL commands that can overwrite the printer configuration. Check the driver or software media-related setting. |
Printer Diagnostics

Self tests give information about the condition of the printer. The most commonly used are the Power-On and the CANCEL self tests.

Caution • Be sure that the print width is set to match the label width you are using before running any self tests. If the labels are not wide enough, the test may print on the platen roller and damage it.

Power-On Self Test

The Power-On Self Test (POST) is performed automatically each time the printer is turned on. During either test sequence, the front panel LEDs light up and the LCD monitors the progress of the POST. If the printer fails any of these tests, FAILED shows on the LCD. If this occurs, notify an authorized Zebra reseller.

Additional Printer Self Tests

These self tests produce sample printouts and provide specific information that help determine the operating conditions for the printer.

Each self test is enabled by pressing a specific front panel key or combination of keys while turning the power On (I). Keep the key(s) depressed until the DATA light turns off. When the POST is complete, the selected self test starts automatically.

Note • When performing a self test, do not send a label format to the printer. For remote hosts, disconnect all data interface cables from the printer. For printers in Peel-Off Mode, remove the labels as they come out of the printer.
Troubleshooting
Printer Diagnostics

CANCEL Self Test

The CANCEL self test prints a configuration label, which tells you the current settings for the printer.

To perform the CANCEL Self Test, complete these steps:

1. Turn Off (O) the printer.
2. Press and hold CANCEL while turning the power On (I). Hold CANCEL until the DATA light turns off.

A printer configuration label prints (Figure 54).

Figure 54 • Printer Configuration Label

The printer configuration can be changed by performing a calibration procedure. See Calibrate the Printer on page 32 for more information.
PAUSE Self Test

This self test can be used to provide the test labels required when making adjustments to the printer’s mechanical assemblies. See the sample printout below.

To perform a PAUSE self test, complete these steps:

1. Turn Off (O) the printer.
2. Press and hold PAUSE while turning the power On (I). Hold PAUSE until the DATA light turns off.
   - The initial self test prints 15 labels at 2.4 in. (61 mm) per second (1 in. or 25.4 mm per second for the 96XiIIIPlus), then automatically pauses the printer. When PAUSE is pressed, an additional 15 labels print. Figure 55 shows a sample of the labels.

   Figure 55 • PAUSE Test Label

   • While the printer is paused, pressing CANCEL alters the self test. When PAUSE is pressed, 15 labels print at 6 in. or 152 mm per second (4 in. or 102 mm per second for the 96XiIIIPlus).
   • While the printer is paused, pressing CANCEL again alters the self test a second time. When PAUSE is pressed, 50 labels print at 2.4 in. (61 mm per second). For the 96XiIIIPlus, printing occurs at 1 in. (25.4 mm) per second.
   • While the printer is paused, pressing CANCEL again alters the self test a third time. When PAUSE is pressed, 50 labels print at 6 in. (152 mm) per second. For the 96XiIIIPlus, printing occurs at 4 in. (102 mm) per second.
   • While the printer is paused, pressing CANCEL again alters the self test a fourth time. When PAUSE is pressed, 15 labels print at the printer’s maximum speed.
   • To exit this self test at any time, press and hold CANCEL.
FEED Self Test

This test helps you choose the best darkness setting for your printer.

To perform a FEED self test, complete these steps:

1. Turn Off (O) the printer.

2. Press and hold FEED while turning the power On (I). Hold FEED until the DATA light turns off.

The printer prints a series of labels (Figure 56) at various speeds and at darkness settings higher and lower than the darkness value shown on the configuration label.

3. Inspect the labels and determine which one has the best print quality for your application. The darkness value printed on that label is added to (plus) or subtracted from (minus) the darkness value specified on the configuration label. The resulting numeric value (0 to 30) is the best darkness value for that specific label/ribbon combination and print speed.

4. Enter the corresponding darkness and print speed values into the printer through the front panel.
**FEED and PAUSE Self Test**

Performing this self test temporarily resets the printer configuration to the factory default values. These values are active only until power is turned off unless you save them permanently in memory.

**To perform a FEED and PAUSE self test, complete these steps:**

1. Turn Off (O) the printer.
2. Press and hold FEED and PAUSE while turning the power On (I). Hold FEED and PAUSE until the DATA light turns off.
   No labels print at the end of this test.

**Communications Diagnostics Test**

This test is controlled from the front panel display. See *Setting Communications Mode* on page 65. Figure 57 shows a typical printout from this test. Turn off the power to exit this self test and return to normal operation.

**Note** • The communications test label prints upside-down.

**Figure 57 • Communications Diagnostics Test Label**

![Label image]

**Additional Printer Diagnostics**

Additional diagnostic tests are available for this printer. See the *Maintenance Manual* for information about these additional tests.

Features

This section lists the standard and optional features for the printer.

Standard Features

Note • Printer specifications are subject to change without notice.

• Thermal transfer and direct thermal printing
• DRAM 16 MB
• USB 2.0 Port
• Real-time Clock
• Advanced Counter

Print Modes

Five different print modes can be used, depending on the printer options purchased:
• Tear-Off Mode: Labels are produced in strips.
• Peel-Off Mode: Labels are dispensed and peeled from the backing as needed.
• Cutter Mode: Labels are printed and individually cut.
• Applicator Mode: The printer is part of a larger label application system.
• Rewind Mode: Labels are rewound internally.

Zebra Programming Language (ZPL II®)

ZPL features include:

• Downloadable graphics, scalable and bitmap fonts, and label formats
• Object copying between memory areas
• (RAM, memory card, and internal Flash)
• Code page 850 character set
• Data compression
• Automatic virtual input buffer management
• Format inversion
• Mirror image printing
• Four-position field rotation (0°, 90°, 180°, 270°)
• Slew command
• Controlled via mainframe, mini-computer, PC, portable data terminal
• Programmable quantity with print, pause, and cut control
• Communicates in printable ASCII characters
• Error-checking protocol
• Status message to host upon request
• Serialized fields
• In-spec OCR-A and OCR-B
• UPC/EAN
• User-programmable password
Bar Codes

Types of bar codes include:

- Bar code ratios—2:1, 7:3, 5:2, 3:1
- Codabar (supports ratios of 2:1 up to 3:1)
- CODABLOCK
- Code 11
- Code 39 (supports ratios of 2:1 up to 3:1)
- Code 49 (two-dimensional bar code)
- Code 93
- Code 128 (with subsets A, B, and C and UCC case codes)
- Check digit calculation where applicable
- Data Matrix
- EAN-8, EAN-13, EAN extensions
- ISBT-128
- Industrial 2 of 5
- Interleaved 2 of 5 (supports ratios of 2:1 up to 3:1, Modulus 10 Check Digit)
- LOGMARS
- MaxiCode
- Micro PDF
- MSI
- PDF-417 (2-dimensional bar code)
- PLANET code
- Plessey
- POSTNET
- QR-Code
- RSS code
- Standard 2 of 5
- TLC 39
- UPC-A, UPC-E, UPC extensions
-...

Agency Approvals for All Printers

Approvals include:

- Binational UL 60950 3rd edition/CSA CAN/CSA-C22.2 No. 60950-00 3rd edition
- IEC 950/EN60950
- EN55022:1998 Class B
- EN55024: 1998
- EN61000-3-2,3
- Canadian ICES-003, Class B
- FCC class B
- Argentina 92/98 Phase 3
- Australia AS/NZS 3548
- R.O.C. CNS 13438

Compliance for All Printers

- Complies with FCC class B and Canadian Doc. class A rules
- Carries the CE mark of compliance

Ribbon Specifications by Model

Refer to the tables that follow for ribbon specifications for your type of printer.

**Note** • Match the ribbon to the label width and printhead width that you are using.
- Ribbon must be wound with the coated side out.
- Ribbon should be at least as wide as the labels to protect the printhead from excessive wear.

Label Specifications

*XiIIIPlus* printers need the correct size and type of labels for best performance. Refer to the tables that follow for the specifications.

### 110XiIIIPlus Printers

**Important** • Media registration and minimum label length are affected by label type and width, ribbon type, print speed, and printer mode of operation. Performance improves as these factors are optimized. Zebra recommends qualifying any application with thorough testing.

**Label Specification Key** This table contains the key for the label modes, dimensions, and directions:
