

Stratis™ Integration Solution

A Mobile Solution for Greater Flexibility

Integration System

Designed to present the tablet to both the clerk and the customer with a smooth rail system, the Stratis™ Tablet Holder has a pleasing look and is feature rich. The adjustable clamping system allows for a variety of tablet sizes to be used. A hidden button releases the tablet converting it from a Thin POS station to a mobile solution in seconds. The magnetic base secures the Stratis™ Tablet Holder to the drawer for easy and secure placement.

Cable management is included with the Stratis™ Integration Solution allowing the retailer to hide a variety of peripheral power cables including the tablet's USB charging cable. The Stratis™ cash drawer comes standard with a chrome strip on the rear of the drawer which faces the customer. Retailers can choose to add an optional LED strip to further add to the aesthetics.

Sleek Design

Integrates easily into a retailer's modern cloud-based environment. Optional LED accent feature is available.

Cable Management

Includes USB power port for easy powering of your tablet under cable cover. Optional Bluetooth connectivity is available.

Smooth Rail System

Magnetic connection between the Stratis™ Tablet Holder and the drawer enables a tablet to seamlessly slide over to the customer facing side for signature approvals.

Tablet Agnostic Solution

Adjustable tablet holder fits tablets between 6.6" and 8.5". Tablet can be placed in either portrait or landscape mode. *Please note, the Stratis™ Cash Drawer and the Stratis™ Tablet Holder are sold separately. Refer to the two separate set of part numbers on page two.*

Tablet can be placed in either portrait or landscape mode
