BarTender Track and Trace & Brady CT70 RFID Inventory Management Solution

BarTender™

BRADY®

Brady CT70

Hardware: Brady CT70

Software: BarTender Track & Trace

Solution: BarTender Track & Trace is an RFID- and scan-based item and inventory tracking system that lets you count, find, and report on the physical items and assets moving through your operations. It replaces manual, error-prone counting and searching with fast, highly accurate receiving, cycle counts, and locate functions supported by mobile tools, RFID technology, and a real-time visual dashboard that shows where items are within your facility. As a stand-alone solution that also integrates with BarTender Labeling, the result is elevated inventory accuracy, less time spent chasing missing items and generating reports, and reliable, audit-ready data across an item's entire lifecycle.
