

ADD MORE PRODUCTIVITY TO YOUR MANUFACTURING PROCESS

Newcastle Systems powered carts equal savings and greater efficiency. They are so effective at eliminating non-productive time — in transport, waiting, and wasted motion — they are an invaluable part of any Lean Manufacturing initiative, and will turn your production floor into a *productivity floor*.

No faster way to boost productivity

Mobile workstations are designed to provide flexibility and efficiency by allowing workers to access essential tools and technology wherever they are needed. With their ergonomic design and integrated power supply, employees can effortlessly move these workstations throughout the workspace, reducing downtime and eliminating the need to return to a fixed workstation.

MANUFACTURING MOVES FASTER WITH NEWCASTLE

Newcastle powered carts solutions slash wasted time and boost output across your operations, from raw materials receiving to machine maintenance, QA testing, and shipping. Our carts bring workers where they're needed and keep them on task, with all-day power right on board.

RAW MATERIALS RECEIVING

Receiving in manufacturing is often overlooked, leading to bottlenecks, labeling errors, and wasted labor — costing thousands of dollars annually. Our Mobile Receiving Stations enable your workers to print right at the pallet, double output, and eliminate 90%+ of label errors.

QUALITY ASSURANCE & TESTING

QC testing has historically involved walking parts to a separate location for testing, causing wasted motion, waiting, and downtime. Today, Mobile QA/Testing Stations eliminate this by bringing the testing process directly to your lines, reducing waste and increasing efficiency.

INSPECTION & MAINTENANCE

Say goodbye to lugging tools and equipment to the worksite. Our Mobile Inspection & Maintenance Stations transport everything you need, minimizing worker fatigue. They let technicians move around the facility with ease, and provide a steady platform to ensure precision in delicate procedures, eliminating errors. Full screen access to work instructions & schematics are a major plus, too.

FINISHED GOODS LABELING & SHIPPING

Traditional manual labeling processes can lead to errors and costly mistakes. Mobile Shipping Stations enable printing labels directly at the product, reducing errors and eliminating unnecessary walking to static printers. By streamlining the labeling process, productivity can double, allowing workers to handle goods faster and more efficiently.

MOBILE ERP & SUPERVISOR STATION

Our Mobile Powered Supervisor Station is the ultimate solution for on-the-go productivity. Boasting a spacious work surface and seamless access to your ERP, this innovative mobile office is your ticket to greater efficiency. With their tools at their fingertips, supervisors can provide support, deliver training, collect vital data, and more.
