Overhaul Cargo Security and Control

Honeywell

Honeywell CT70
Mobile Computer

Hardware: Honeywell CT70 Mobile Computer

Software: Overhaul

One-liner: Real-time monitoring and control over high-value, high-consequence goods in motion

Solution: Overhaul is the supply chain platform that gives global brands real-time monitoring and control over goods in motion. Purpose-built to protect high-value, time-sensitive, and temperature-controlled shipments, we combine SKU-level visibility, predictive risk intelligence, and compliance monitoring with a 24/7 operations center that intervenes when things go wrong. Dashboards and scores don't stop cargo theft, fraud, or cold chain excursions. Overhaul delivers alerts and prescriptions you can act on instantly, so shippers, carriers, and logistics providers move goods smarter, safer, and under their control.
